Grupo de trabalho das entidades

*[wiki.duraspace.org/display/DSPACE/
DSpace+Entities+Working+Group](http://wiki.duraspace.org/display/DSPACE/DSpace+Entities+Working+Group)*

Grupo de trabalho de entidades

Out 2017- Mar 2018

- **Objetivos**

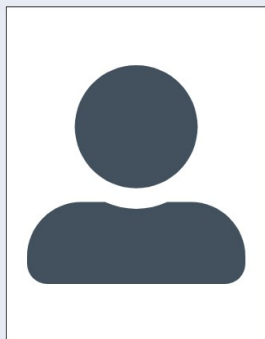

- **Conscientizar sobre a necessidade de** gerenciar as entidades e suas relações
- **Propor uma solução para permitir que o Dspace suporte, gerencie e relacione as entidades**
- **Especificar a arquitetura global e os requisitos**
- **Propor um caminho para** implementar a solução proposta.

Grupo de trabalho de entidades

- Principios do desenho da solução:
 - Evitar hard-coding um objeto específico
 - Implementação de modelo de dados configurável
 - Inicia pelo objeto Item do DSpace
 - Items podem ser tipados
 - Relações entre itens tipados podem ser definidas.

Reuso das funções atuais

- Item como um objeto mais genérico
- Funções que o dspace disponibiliza podem ser reusadas com modificações mínimas:
 - Formulários por tipo
 - Buscar entidades
 - OAI-PMH
 - Batch import
 - ...

Journal: Journal of Financial Therapy

ISSN

1945-7774

Publisher

Kansas State University

Editor-in-Chief

Kristy L. Archuleta

Description

The Journal of Financial Therapy primarily publishes clinical, experimental, and survey research that examines the empirical link between personal financial knowledge, attitudes, and behaviors and personal and family well-being. The journal also accepts cross-sectional survey research, longitudinal and panel study research, case studies, financial therapy practice management tutorials, and literature reviews. Articles from financial therapists, both those working in academia and in practice, are welcomed.

Volume Title

Journal of Financial Therapy Volume 7

Abstract

The Journal of Financial Therapy would not exist without the time and efforts of our excellent reviewers. You may be asking, “what does a reviewer do?” JFT is a unique scholarly publication because papers require the rigor of academic standards, but also must be translatable to non-researchers. It is not uncommon for researchers and practitioners to fail to communicate effectively with one another because the two groups speak what seems like different languages. Therefore, it is the goal of JFT to publish quality scholarly research and to emphasize the practicality of the research.

Description

Autophagy is an important degradation pathway, which is induced after starvation, where it buffers nutrient deprivation by recycling macromolecules in organisms from yeast to man. While the classical pathway mediating this response is via mTOR inhibition, there are likely to be additional pathways that support the process. Here, we identify Annexin A2 as an autophagy modulator that regulates autophagosome formation by enabling appropriate ATG9A trafficking from endosomes to autophagosomes via actin. This process is dependent on the Annexin A2 effectors ARP2 and Spire1. Annexin A2 expression increases after starvation in cells in an mTOR-independent fashion. This is mediated via Jun N-terminal kinase activation of c-Jun, which, in turn, enhances the trans-activation of the Annexin A2 promoter. Annexin A2 knockdown abrogates starvation-induced autophagy, while its overexpression induces autophagy. Hence, c-Jun-mediated transcriptional responses support starvation-induced autophagy by regulating Annexin A2 expression levels.

Central role for B lymphocytes and CD4(+) T cells in immunity to infection by the attaching and effacing pathogen *Citrobacter rodentium*

(2003-09-01) Simmons, Cameron

Citrobacter rodentium, an attaching-effacing bacterial pathogen, establishes an acute infection of the murine colonic epithelium and induces a mild colitis in immunocompetent mice. This study describes the role of T-cell subsets and B lymphocytes in immunity to *C. rodentium*. C57Bl/6 mice orally infected with *C. rodentium* resolved infection within 3...

Publication

Fatal outcome of human influenza A (H5N1) is associated with high viral load and hypercytokinemia

(2006-10-01) Simmons, Cameron

Avian influenza A (H5N1) viruses cause severe disease in humans, but the basis for their virulence remains unclear. In vitro and animal studies indicate that high and disseminated viral replication is important for disease pathogenesis. Laboratory experiments suggest that virus-induced cytokine dysregulation may contribute to disease severity. To assess the relev...

Grupo de trabalho de entidades

Próximos passos

Em ordem de prioridade, conforme votado no grupo de trabalho

- Quais campos de metadados devem ser usados para cada tipo de entidade
- Integração com submissão (criação de entidades)
- Integração com submissões (criação de relações)
- Dados adicionais para relações (metadados ou rótulos nas relações)
- Variantes do nome do autor
- Criando relações durante a importação em lote (via CSV) para novas entidades
- Permissões explícitas nas Relações
- Excluindo objetos com Relações
- Backup e restauração de AIP (de entidades)
- Exibição dinâmica de relações
- Implementação do OpenAIRE v4 usando Entidades
- Integração ORCID para Entidades Pessoa
