Agenda

• What is Hydra?
• What is Blacklight?
• Where are they going?
• What does it all mean?
What Is Hydra?

• A robust repository fronted by feature-rich, tailored applications and workflows (“heads”)

慎 One body, many heads

• Collaboratively built “solution bundles” that can be adapted and modified to suit local needs.

• A community of developers and adopters extending and enhancing the core

慎 If you want to go fast, go alone. If you want to go far, go together.
Fundamental Assumption #1

No single system can provide the full range of repository-based solutions for a given institution’s needs,

...yet sustainable solutions require a common repository infrastructure.

A Tale of Two Workites
Stephen Jay Gould
Museum of Comparative Zoology
Harvard University
Cambridge, MA 02138

Christopher Wren, the leading architect of London's reconstruction after the great fire of 1666, lies buried beneath the floor of his most famous building, St. Paul's cathedral. No elaborate sarcophagus adorns the site. Instead, we find only the famous epitaph written by his son and now inscribed into the floor: a monument requirit, exemplum - if you are searching for his monument, look around. A tall grandson, perhaps, but I have never read a finer testimony to the central importance - one might even say sanctuaries - of actual places, rather than replicas, symbols, or other forms of vicarious resemblance.

An odd coincidence of professional life recently turned my thoughts to this most celebrated epitaph. For the second time, I received an office in a spot laden with history, a place still redolent with ghosts of past events both central to our common culture and especially meaningful for my own life and choices.

In 1973, I spent an academic term as a visiting researcher at Oxford University. I received a cranny of office space on the upper floor of the University Museum. At first, I set up my books, fossil skulls and microscope. I noticed a metal plaque affixed to the wall, informing me that this reconfigured space of shelves and cubicles had been, originally, the site of the most famous public confrontation in the early history of Darwinism. On this very spot, in 1860, just a few months after Darwin published the Origin of Species, T.H. Huxley had drawn his rhetorical sword, and soundly skewered the slick but superficial champions of creation, Bishop "Stumpy Sam" Wilberforce.

As with most legends, the official version ranks as mere chestnut before a much more complicated and multifaceted truth. Wilberforce and Huxley did put on a splendid, and largely spontaneous, show - but no clear victor emerged from the scuffle and Joseph Hooker. Darwin's other champions, made a much more effective reply to the Bishop, however forgotten by history. See any essay on this debate, entitled "Knight takes Bishop!" and included in an earlier volume of this series: Baillie for Brontosaurus.

I can't claim that the lingering presence of these Victorian giants increased my resolve or improved my work, but I loved the sense of continuity vested in me by this happy circumstance. I even treasured the etymology - for "circumstance" means "standing around" (or}

  (ReadOnly)

- Fedora

- Solrizer

- Solr
A Note on Ruby on Rails

- *Rapid* application development for web applications: “Convention over configuration”
  - 10x productivity
- Supportable: MVC (Model-View-Controller) and Rails framework make code well-structured, predictable
- Testable: Rspec and Cucumber give powerful, automatable, testing tools
- Learnable: Stanford went from 1 to 8 Ruby savvy developers in one year (no new hires)
  - 1 week learning curve to basic proficiency
A Note on Fedora

• Flexible, Extensible, *Durable* Object Repository Architecture
  – Flexible: model and store any content types
  – Extensible: easy to augment with apps and services
  – Durable: foundation of preservation repository

• Proven, sustained and successful digital repository
  – 100’s of adopters; 12 years of development, 3 releases
  – Vibrant community & funding under DuraSpace

• Fedora 4 in development; co-evolving with Hydra
Hydra Community Framework
Fundamental Assumption #2

No single institution can resource the development of a full range of solutions on its own,

...yet each needs the flexibility to tailor solutions to local demands and workflows.
Hydra Philosophy -- Community

• An open architecture, with many contributors to a common core
• Collaboratively built “solution bundles” that can be adapted and modified to suit local needs
• A community of developers and adopters extending and enhancing the core
• “If you want to go fast, go alone. If you want to go far, go together.”

One body, many heads
Community

• Conceived & executed as a distributed, collaborative, open source effort from the start

• Initially a joint development project between Stanford, Univ of Virginia, and Univ of Hull

• Hydra Partners are the backbone of the project
  • Coalition of the willing
  • No fees or dues
  • Apache-style consensus and governance

• Steering Group provides administration, continuity, and serves as backstop when needed
  • But no central planning, no Project Director, no “one” architect
Hydra Partners...

...are individuals, institutions, corporations or other groups that have committed to contributing to the Hydra community; they not only use the Hydra technical framework, but also add to it in at least one of many ways: code, analysis, design, support, funding, or other resources.

**Hydra Partners collectively advance the project and the community for the benefit of all participants.**

https://wiki.duraspace.org/display/hydra/Hydra+Community+Framework
Code Licensing

• All Hydra code is available under Apache License, Version 2.0

• All code commitments are being managed through Contributor License Agreements
  • Individual – so each developer is clear about what they are contributing
  • Corporate – so each institution is clear about what it is contributing

• Code contributors maintain ownership of their IP
  • …and grant a non-exclusive license to the project and its users

Current State of Hydra

• Doubled in size, thrice, since its founding
• Achieved all its original goals
• Entering a new phase
Three critical priorities

1. Technical framework continue to advance to enable easy code sharing and reuse
2. Community framework evolves to accommodate growth in partners.
3. Create a full suite of solution bundles
Eight strategic priorities

1. Develop solution bundles
2. Develop turnkey applications
3. Grow the Hydra vendor ecosystem
4. Codify a scalable training framework to fuel community growth
5. Develop a documentation framework
6. Ensure the technical framework allows code sharing
7. Refresh and intensify the community ties
8. Grow the community of users and adopters
Blacklight
Blacklight for Repositories

• Repository-agnostic, feature-rich, content-aware, turnkey access interface

• Aggregate content from multiple repositories, with links back to source systems

• Vibrant, multi-institutional, open source community on its own

• Can be used independently, or as the first component of, Hydra
Blacklight

• Who’s Using It?
  – Scores (probably hundreds) of institutions
  – Notables: UVa, Stanford, Columbia, Cornell, Princeton, Yale, Johns Hopkins, WGBH, BPL, NYPL, Danish Technical University, Tufts, Indiana University, Univ. of Wisconsin, et al.
  – Every Hydra institution

• Remarkably strong community
  – 328 members on blacklight-development@googlegroups.com
Blacklight Development

In a Nutshell, Blacklight...

... has had 2,135 commits made by 49 contributors representing 10,855 lines of code

... has a codebase with a long source history maintained by a large development team with increasing Y-O-Y commits

... took an estimated 3 years of effort (COCOMO model) starting with its first commit in October, 2009 ending with its most recent commit 1 day ago

The John Dugdale Collection of the Revs Institute

Total Items: 693

Dugdale began his career in 1933 as a motor sports photo-journalist with Autocar magazine. In the 1960s and 1970s he held several important positions in the automotive industry, most notably as the public relations director for the Jaguar, Rover, and Triumph Division at British Leyland of America. The John Dugdale Collection consists of monochrome and color photographs from 1935 through 1948. The collection includes rare images of attempts at the Land Speed Record from Nazi-era Germany along the Autobahns as well as John Cobb’s 1939 Napier-Railton land speed car at the Bonneville Salt Flats in Utah. Other images include the French Grand Prix and German Grand Prix in 1938 and ... more »

Maps of Africa: A Virtual Collection

A digital collection of African Maps at the Stanford University Libraries

Limit your search
- Geographic Region
- Topic
- Era

Stanford's Maps of Africa Collection became a major research resource in August of 2001 with the acquisition of the Oscar I. Norwich Collection of Maps of Africa and its islands, 1486 – ca. 1900. This acquisition added 318 maps to Stanford's existing holdings of Maps of Africa. The collection was once again augmented in 2010 with the purchase of 294 maps from Caroline Batchelor, and then again in 2011 with a small set of maps from Rodney Shirley. Altogether, the Maps of Africa Collection holds over 700 maps, 632 of which are searchable and viewable through Stanford's Image Gallery.

The Hydra-Blacklight Way
Why Hydra?

• Need a flexible, rich, robust repository solution
• Be part of a community
  – Shared resources, shared risk, shared advances
• “We” is smarter than “me”
  – Especially in this crowd
• Control your own destiny
• Build institutional capacity
• Practice best practices
• The way work is getting done now
If You Want To Go Fast …go alone.
…use Hydra

1) Notre Dame deployed a video cataloging head in 6 weeks, from scratch

2) Hypatia development at Stanford
   - First 20% of project took 80% of time (modelling, data acquisition and preparation)
   - 80% of deliverables (coding) happened in 8 week spurt, by leveraging Hydra
Becoming a Hub

• Working Groups forming
  – Repository Managers
  – Archivists
  – Hydra RDF
  – Fedora…

• Jobs
Sustainability…

- For institutions
  *Partners help shoulder the load*

- For other projects
  *Post-project maintenance & governance*

- For leveraging funders’ investments
  *Adoption by growing user community*
