A collaboration of Tufts Department of Art and Art History, Educational and Scholarly Technology Services (ESTS), Digital Collections and Archives (DCA) and Tisch Library.

Funding secured in FY14 (contributions from all 4 campus units) and we partnered with Data Curation Experts (DCE) for software development.

We modeled our concept on the functionality of Northwestern’s Digital Image Library. Images added via our Administrative interface, MIRA.

Functionality includes ability to:
- Create and edit curated and personal collections
- Nest collections

- Drag and drop images to collection folders
- Reorder images in a folder
- Separate Admin and user permissions
- Upgrade personal collections to curated collections
- Downgrade curated collections to personal collections
- Copy collections
