Description: The University of Michigan (U-M) Library and the National Center for Institutional Diversity (NCID) developed a toolkit for diversity scholars to provide guidance on best practices in the research data lifecycle -- collecting, managing, utilizing, sharing and curating research data for the public good. They incorporated Diversity, Equity, Inclusion and Access (DEI and A) principles, including responsibilities to communities being studied, this project relied on the emerging field of critical data studies to inform its work.
