- Nianli Ma
- Nick Ruest
- Osman Din
- Ralf Claussnitzer

Summary

The focus of the 4.2.0 release was twofold:

- Establish an Audit Service
- Create and exercise tooling for Fedora 3 to 4 migrations

Additionally, numerous bugs and housekeeping issues were addressed.
The reason this release is 4.2.0 instead of 4.1.2 is because the required version of Java was upgraded to Java 8 per the project policy [3].

Updates

Audit Service

1. Establish framework for capturing internal and external events in an external triplestore
2. Establish framework for persisting internal and external events within the repository
3. Create Audit Service administrator documentation [4]

Fedora 3 to 4 Migration

1. With the migration-utils utility [5], enable the following types of migration from Fedora 3 to Fedora 4
   a. Simple RDF datastreams
   b. Redirect datastreams
   c. External datastreams
   d. Datastream properties
   e. RDF properties in RELS-INT datastreams
   f. Legacy-FS FOXML

Fedora Java Client

1. Update Fedora 4 Java Client library [6] to:
   a. Support property updates on Non-RDF Source Descriptions
   b. Support creation of Fedora 4 "external" content with "message/external-body" content-type
1. Update build machinery and projects for Java 8

Bugs and Housekeeping

1. Bug: Creating a node in the web application through a proxy causes the baseURL to be set incorrectly
2. Standardizing underlying libraries
3. Updating ReadMe files
4. Refactoring code
5. Reducing leakage of JCR concepts
6. Improve OSGi support
