Objectives
The objectives of sprint-04 are to:
1. Test compatibility of exported Bags with:
   a. APTrust
   b. Perseids
   c. Archivematica
2. Test compatibility of import/export round-tripping between community and alternate Fedora implementations
3. Import/export of versions
   a. Note: Want to keep upcoming Memento API alignment
4. Lossless round-tripping (particularly dates)
   a. other round-tripping issues, e.g.: FCREPO-2429 - Semantic differences between exports
5. Resolve import bugs that were reported from v0.1 testing
6. Verification tool
   a. Unicode-escaping when resources are exported leads to mismatch when those resources are re-imported
   b. Users are confused by the tool output
   c. Lower priority:
      i. Gracefully handling server-managed triples and timestamps that can't be updated
      ii. Verifying Fedora-to-Fedora and disk-to-disk
      iii. Anything special required for Bags?
7. Lower-priority
   a. Importing into non-empty containers
      i. There may be several facets to this: importing into a container that already exists (other children of the same resource already exist) seems very useful, but syncing with an existing resource may be much more complex. We should support the easy things, and be careful when tackling the more complex scenarios to maintain a good scope with stakeholder input.
   b. Maintain links in Bags with links to resources outside of Bags
      i. Revisit whether this is still an issue given the current Bag export/import functionality
   c. Incremental diffs of Bags, relating to sending updated Bags to preservation services, not re-transmitting large files that haven't changed, and not overwriting good content with content that's been corrupted, etc.
## Resources

1. **Design** - **Import** - **Export**
2. Applications / tools for using and testing the import export
      i. Updated May 23, 2017: [s3.amazonaws.com/f4-artifacts/fcrepo-webapp-4.8.0-SNAPSHOT-jetty-console-a07a1a46.jar](https://s3.amazonaws.com/f4-artifacts/fcrepo-webapp-4.8.0-SNAPSHOT-jetty-console-a07a1a46.jar)
   b. Fedora 0.1.0 Import / Export utility: [https://github.com/fcrepo4-labs/fcrepo-import-export/releases/tag/fcrepo-import-export-0.1.0](https://github.com/fcrepo4-labs/fcrepo-import-export/releases/tag/fcrepo-import-export-0.1.0) 
      i. Do not use: Updated May 23, 2017: [s3.amazonaws.com/f4-artifacts/fcrepo-import-export-0.1.1-SNAPSHOT-5240eae2.jar](https://s3.amazonaws.com/f4-artifacts/fcrepo-import-export-0.1.1-SNAPSHOT-5240eae2.jar)
      ii. Updated May 24, 2017: [s3.amazonaws.com/f4-artifacts/fcrepo-import-export-0.1.1-SNAPSHOT-d4780ca2.jar](https://s3.amazonaws.com/f4-artifacts/fcrepo-import-export-0.1.1-SNAPSHOT-d4780ca2.jar)
      iii. Updated May 26, 2017: [s3.amazonaws.com/f4-artifacts/fcrepo-import-export-0.1.1-SNAPSHOT-0e42348f.jar](https://s3.amazonaws.com/f4-artifacts/fcrepo-import-export-0.1.1-SNAPSHOT-0e42348f.jar)
   c. Fedora 0.0.3 Import / Export verification utility: [https://github.com/fcrepo4-labs/fcrepo-import-export-verify/releases/tag/0.0.3](https://github.com/fcrepo4-labs/fcrepo-import-export-verify/releases/tag/0.0.3)
3. Steps for using the above

   - Download the utility: [https://github.com/fcrepo4-labs/fcrepo-import-export/releases](https://github.com/fcrepo4-labs/fcrepo-import-export/releases)
   - Have a running Fedora
     If you do not have a Fedora to test with, you may want to start up the "one-click run": [https://wiki.duraspace.org/display/FEDORA4x/Quick+Start#QuickStart-One-ClickRun](https://wiki.duraspace.org/display/FEDORA4x/Quick+Start#QuickStart-One-ClickRun)
   - Have data in your Fedora
     If you do not have data in your Fedora, you will likely want to load some of your own or one of the existing example datasets: [https://github.com/fcrepo4-labs/fcrepo-sample-dataset/tree/master/additional_datasets](https://github.com/fcrepo4-labs/fcrepo-sample-dataset/tree/master/additional_datasets)

Although there are minimal instructions in the readme linked above, if you run into issues loading any of these datasets, I would be happy to help... the possibility of issues arising is not inconceivable.

- Export your data as Bagit bags

To export APTrust-style bags, use the "--bag-profile aptrust" argument when running the utility.
