Daylight Saving Time began on March 8 for parts of USA

Daylight Saving Time (DST) starts in parts of the USA on March 8, but starts in Europe on March 29. Because DST begins on different days in different parts of the world, this meeting time will change (temporarily) for anyone who experiences DST earlier.

The meeting will remain at **15:00-16:00 UTC** through March, but this will now be one hour later for anywhere under DST.

As of April 2, once everyone is in DST, the meeting time will switch to 14:00-15:00 UTC (one hour earlier), in order to move it back into the normal timeslot for everyone.

- Available Angular UI Tickets
  - Open issues in 7.0beta2 milestone (highest priority)
  - Open issues in 7.0beta3 milestone (second highest priority)
- Available REST API Tickets
  - Unassigned tickets scheduled for 7.0beta2 (highest priority)
  - Unassigned tickets scheduled for 7.0beta3 (second highest priority)
  - General REST API tickets flagged as "low hanging fruit". These may be a good starting point for newer developers.

Delayed / Needs Discussion
1. Managing Authorization info in Angular UI:
How to pass Authorization rights (i.e. logged in user's access rights) from REST API to
Angular? See for example: https://github.com/DSpace/dspace-angular/issues/393
a. In July 25 meeting, we noted this probably cannot be resolved with just one simple solution. May need to look at different options for
different scenarios
b. Work is ongoing, but has been started in these areas:
   i. Summary of ideas: REST Authorization
   i. Contract for Authorization Endpoints:
      https://github.com/DSpace/Rest7Contract/pull/92
   iii. Contract for ResourcePolicies:
      https://github.com/DSpace/Rest7Contract/pull/97
2. Initial Performance Testing from Chris.
3. (REST Contract) Edit Homepage News:
   https://github.com/DSpace/Rest7Contract/pull/45
   a. Delayed. General agreement (in meeting on March 21, 2019) that storing HTML in metadata fields is not really ideal behavior. Metadata
   (from a librarian standpoint) tends to be free of format-related markup (as that allows for easier sharing, understanding of
   metadata. Currently Community & Collection homepage information is HTML-based and is stored in metadata that is appropriate for a
   minor subset of information (like the title) but it is better to move large/rich text to bitstreams.
   b. Proposal here is to consider storing HTML-based markup (for Site, Community & Collection homepages) in Bitstream(s) associated with
   the object in question. May allow for more CMS-lite behavior in the future
   c. Timeline for this is uncertain. Possibly in 7 or 8. May depend on how/whether it can be scoped.
5. Concurrency in DSpace 7 (or 8). What do we want to do when multiple editors are editing the same object?
   Needs further analysis regarding implementation details
   a. We've decided (in meeting on March 7, 2019) to use ETags to implement concurrency. REST Contract notes on ETags:
      https://github.com/DSpace/DSpace/Rest7Contract/pull/45
   b. ETags only update of the two fields match. If someone edits first, your edit would fail and you would get a fail response (422?)
   c. ETags seems to have broader support in other REST APIs. Recommended also by both Art and Andrea.
