Removing Entities from VIVO

- General Method
- Examples
  - Remove publications by type
    - Article
    - Book
    - Case Study
    - Conference Paper
    - Editorial Article
    - Proceedings
    - Review
    - Academic Article
  - Remove Other Entities
    - Journal

General Method

To remove entities from VIVO, run SPARQL queries to retrieve the triples for the entities as RDF. Then go to Site Administration -> Advanced Data Tools -> Add or Remove RDF Data to upload the RDF to remove the triples for the entities.

Entities that are involved in relationships will need more attention. The relationship involving the entity should also be removed.

Examples

Remove publications by type

Run the following SPARQL CONSTRUCT queries to retrieve the triples associated with the entities:

**Article**

```sparql
construct {
  ?s ?p ?o
} where {
  ?s rdf:type bibo:Article .
}
```

**Book**

```sparql
construct {
  ?s ?p ?o
} where {
  ?s rdf:type bibo:Book .
}
```

**Case Study**

```sparql
construct {
  ?s ?p ?o
} where {
  ?s rdf:type vivo:CaseStudy .
}
```

**Conference Paper**
construct {
} where {
}

Editorial Article
construct {
} where {
}

Proceedings
construct {
} where {
}

Review
construct {
} where {
  ?s rdf:type vivo:Review .
}

Academic Article
construct {
} where {
  ?s rdf:type bibo:AcademicArticle .
}

Remove Other Entities

Journal
construct {
} where {
  ?s rdf:type bibo:Journal .
}
