DSpace Release 1.7.2 Notes

Version 1.7.2

Summary

DSpace 1.7.2 is a minor bug fix release that addressed three issues that cropped up since DSpace 1.7.1. As it only provides bug-fixes, DSpace 1.7.1 should constitute an easy upgrade from DSpace 1.7.0 for most users. No database changes or additional configuration changes should be necessary when upgrading from DSpace 1.7.0 to 1.7.2. The issues that DSpace 1.7.2 addresses are:

- DS-841 Fixed Oracle database support for administrative tasks on ePerson.
- DS-875 Fixed an error message from being spit out when using the DSpace CLI Launcher.
- DS-871 Fixed a caching issue in "Recent Submissions" listing for XMLUI.

Changes

The following fixes are the changes between DSpace 1.7.1 and 1.7.2. Additionally, these fixes were applied to the trunk line of development so future releases such as DSpace 1.8 will have the fixes.

Organizational Details

Release Coordination

- Release Coordinator: Peter Dietz, Ohio State University Libraries

Timeline and Proceeding

Release Timeline:

- Release Date: May 27, 2011.

Release Process needs to proceed according to the following Maven release process: Release Procedure
