

More Functional AUDIT Datastream

1. More functional AUDIT datastream
 - a. API Endpoint to access the stream
 - i. Currently no good way to access the Audit information.
 - b. PREMIS support
 - i. More information in the Audit DS would provide better direct support.
 - ii. For example, Islandora MS actions are recorded in a separate file, but there is no easy way to get that information into the Audit DS.
 - c. This could also help Fedora to build a TRAC complaint repository.
