2021-08-26 DSpace 7 Working Group Meeting

Date
26 Aug 2021 from 14:00-15:00 UTC

Location: https://lyrasis.zoom.us/my/dspace (Meeting ID: 502 527 3040). Passcode: dspace

More connection options available at DSpace Meeting Room

7.1 Release Plan

Tentative Release Schedule:

- Thursday, September 23 (PR Create Date): every PR wanting to get into 7.1 should be created. Any created by this date are "guaranteed" in 7.1. Anything after may not be included in 7.1.
- Sept 23 - Oct 14 (PR Final Reviews): code reviews & PR updates
- Thursday, Oct 14 (PR Merge Date): every PR getting into 7.1 must be merged.
- Monday, Oct 25: Internal/Early release goal. If possible, we'd like to release 7.1 in late Oct.
- Monday, Nov 1: Public Release Deadline. 7.1 must be announced/released by this date.

Ongoing/Weekly tasks:

- Tackle/Claim issues on 7.1 board (starting with "high priority")
- Review/test all PRs assigned to you for review/testing: https://github.com/pulls/review-requested (Prioritize reviews of "high priority" PRs first)

Agenda

- (30 mins) General Discussion Topics
  1. Final decision on REST API design for "Entities Projections": https://github.com/DSpace/RestContract/pull/165
  2. (Other Topics?)
- (30 mins) Planning for next week
  - Review the Backlog Board - Are there any tickets here stuck in the "Triage" column? We'd like to keep this column as small as possible.
  - Review the 7.1 Project Board - Assign tickets to developers & assign PRs to reviewers.
    - Paid (by DSpace project) developers must keep in mind priority. If new "high" or "medium" priority tickets come in, developers should move effort off of "low" priority tasks.
    - Volunteer developers are allowed to work on tickets regardless of priority, but ideally will review code in priority order.

Attendees

- Art Lowel (Atmire)
- Andrea Bollini (4Science)
- Tim Donohue
- Lieven Droogmans
- Giuseppe Digilio (4Science)
- Ben Bosman
- Paulo Graça
- Mark H. Wood

Current Work

Project Board

DSpace 7.1 Project Board: https://github.com/orgs/DSpace/projects/6
New Feature development process for 7.1

- For brand new UI features, at a minimum, the UI ticket should contain a description of how the feature will be implemented
  - If the UI feature involves entirely new User Interface interactions or components, we recommend mockups or links to examples
    elsewhere on the web. (If it’s useful, you can create a Wiki page and use the Balsamiq wireframes plugin in our wiki)
  - Feature design should be made publicly known (i.e. in a meeting) to other Developers. Comments/suggestions must be accepted for
    TWO WEEKS, or until consensus is achieved (whichever comes first). After that, silence is assumed to be consent to move forward
    with development as designed. (The team may decide to extend this two week deadline on a case by case basis, but only before the
    two week period has passed. After two weeks, the design will move forward as-is.)
  - This does mean that if a UI feature is later found to have design/usability flaws, those flaws will need to be noted in a bug ticket (to
    ensure we don’t repeat them in other features) and fixed in follow-up work.
- For brand new REST features (i.e. new endpoints or major changes to endpoints), at a minimum we need a REST Contract prior to
  development.
  - REST Contract should be made publicly known (i.e. in a meeting) to other Developers. Comments/suggestions must be accepted for
    TWO WEEKS, or until consensus is achieved (whichever comes first). After that, silence is assumed to be consent to move forward
    with development. (The team may decide to extend this two week deadline on a case by case basis, but only before the two week period
    has passed. After two weeks, the design will move forward as-is.)
  - This does mean that some REST features may need future improvement if the initial design is found to later have RESTful design
    flaws. Such flaws will need to be noted in a bug ticket (to ensure we don’t repeat them in other features) and fixed in follow-up work.

Issue Triage process for 7.1

- Overview of our Triage process:
  1. Initial Analysis: Tim Donohue will do a quick analysis of all issue tickets coming into our Backlog Board (this is where newly reported
     issues will automatically appear).
  2. Prioritization/Assignment: If the ticket should be considered for 7.1, Tim Donohue will categorize/label it (high/medium/low priority) and
     immediately assign to a developer to further analysis. Assignment will be based on who worked on that feature in the past.
     a. "high priority" label = A feature is badly broken or missing/not working. These tickets must be implemented first, as ideally they
        must be resolved prior to 7.1. (Keep in mind however that priorities may change as the 7.1 release date approaches. So, it is
        possible that a "high priority" ticket may be rescheduled if it is a new feature that cannot fit into 7.1 timelines.)
     b. "medium priority" label = A feature is difficult to use, but mostly works.. These tickets should be resolved prior to 7.1 (but the 7.1
        release will not be delayed to fix these issues).
     c. "low priority" label = A feature has usability issues or other smaller inconveniences or a non-required feature is not working as
        expected. These tickets are simply "nice to have" in 7.1. We'll attempt to fix them as time allows, but no guarantees are made.
  3. Detailed Analysis: Developers should immediately analyze assigned tickets and respond back within 1-2 days. The developer is
     expected to respond to Tim Donohue with the following:
     a. Is the bug reproducible? (If the developer did not understand the bug report they may respond saying they need more
        information to proceed.)
     b. Does the developer agree with the initial prioritization (high/medium/low), or do they recommend another priority?
     c. Does the bug appear to be on the frontend/UI or backend/REST API?
     d. Does the developer have an idea of how difficult it would be to fix? Either a rough estimate, or feel free to create an immediate
        PR (if the bug is tiny & you have time to do so).
     e. Are you (or your team) interested in being assigned this work?
  4. Final Analysis: Tim Donohue will look at the feedback from the developer, fix ticket labels & move it to the appropriate work Board. If it is
     moved to the 7.1 Project Board, then the ticket may be immediately assigned back to the developer (if they expressed an interest) to
     begin working on it.
     a. If the ticket needs more info, Tim Donohue will send it back to the reporter and/or attempt to reproduce the bug himself. Once
        more info is provided, it may be sent back to the developer for a new "Detailed Analysis".

On Hold Topics

- Will we need subminor Release Numbering for 7.x?
  1. Should we potentially have subminor (e.g. 7.0.1) releases to fix major bugs or security issues? Or would those need to wait for the next
     minor (e.g. 7.1) release?
  2. Considering regular, scheduled releases instead of feature-based releases?
     a. Every quarter (3 months) release a new 7.x. Features will be implemented in priority order, but not necessarily guaranteed for
        a specific release.
- Discussing Release Support now that 7.0 is out.
  1. The DSpace Software Support Policy notes that we support the "most recent three (3) major releases" (where a major release is defined
     by the changing of the first number, e.g. 6.x. 7.x). This would mean that 5.x, 6.x and 7.x are all supported at this time.
  2. Should we propose to Committers / Governance a change of policy to the "most recent two (2) major releases"? This would mean that
     we move to only supporting 6.x and 7.x.
