2021-08-19 DSpace 7 Working Group Meeting

- Date
- Agenda
- Attendees
- Current Work
  - Project Board
  - Issue Triage process
  - On Hold Topics
- Notes

Date

19 Aug 2021 from 14:00-15:00 UTC

Location: https://lyrasis.zoom.us/my/dspace (Meeting ID: 502 527 3040). Passcode: dspace

- More connection options available at DSpace Meeting Room

7.1 Release Plan

Tentative Release Schedule:

- Thursday, September 23 (PR Create Date): every PR wanting to get into 7.1 should be created. Any created by this date are *guaranteed* in 7.1. Anything after may not be included in 7.1.
- Sept 23 - Oct 14 (PR Final Reviews): code reviews & PR updates
- Thursday, Oct 14 (PR Merge Date): every PR getting into 7.1 must be merged.
- Monday, Oct 25: Internal/Early release goal. If possible, we’d like to release 7.1 in late Oct.
- Monday, Nov 1: Public Release Deadline. 7.1 must be announced/released by this date.

Ongoing/Weekly tasks:

- Tackle/Claim issues on 7.1 board (starting with "high priority")
- Review/test all PRs assigned to you for review/testing: https://github.com/pulls/review-requested (Prioritize reviews of "high priority" PRs first)

Agenda

(30 mins) General Discussion Topics

1. (Quick note) Posted 7.1 deadline to DSpace Release 7.0 Status
2. (DRAFT) Policy/Procedure on Designing DSpace 7.1 New Features
   a. For brand new UI features, at a minimum, the UI ticket should contain a description of how the feature will be implemented
      i. If the UI feature involves entirely new User Interface interactions or components, we recommend mockups or links to examples elsewhere on the web. (If it’s useful, you can create a Wiki page and use the Balsamiq wireframes plugin in our wiki)
      ii. Feature design should be made publicly known (i.e. in a meeting) to other Developers. Comments/suggestions should be taken in for TWO WEEKS. After that, silence is assumed to be consent to move forward with development.
      iii. This does mean that if a UI feature is later found to have design/usability flaws, those flaws will need to be noted in a bug ticket (to ensure we don’t repeat them in other features) and fixed in follow-up work.
   b. For brand new REST features (new endpoints or major changes to endpoints), at a minimum we need a REST Contract prior to development.
      i. REST Contract should be made publicly known (i.e. in a meeting) to other Developers. Comments/suggestions should be taken in for TWO WEEKS. After that, silence is assumed to be consent to move forward with development.
      ii. This does mean that some REST features may need future improvement if the initial design is found to later have RESTful design flaws. Such flaws will need to be noted in a bug ticket (to ensure we don’t repeat them in other features) and fixed in follow-up work.
3. Follow up on REST API design for "Entities Projections"?: https://github.com/DSpace/RestContract/pull/165
   a. Noted last week the design flaws. However, PR was pending. Based on the PR, are there ways to quickly correct the design flaws and/or create a ticket for future work?
4. (Other Topics?)
   - Review the Backlog Board - Are there any tickets here stuck in the "Triage" column? We’d like to keep this column as small as possible.
   - Review the 7.1 Project Board - Assign tickets to developers & assign PRs to reviewers.
     - Paid (by DSpace project) developers must keep in mind priority. If new "high" or "medium" priority tickets come in, developers should move effort off of "low" priority tasks.
     - Volunteer developers are allowed to work on tickets regardless of priority, but ideally will review code in priority order.

Attendees

- Art Lowel (Atmire)
Current Work

Project Board

DSpace 7.1 Project Board: https://github.com/orgs/DSpace/projects/6

To quickly find PRs assigned to you for review, visit https://github.com/pulls/review-requested (This is also available in the GitHub header under “Pull Requests Review Requests”)

Issue Triage process

Overview of our 7.x Triage process:

1. Initial Analysis: Tim Donohue will do a quick analysis of all issue tickets coming into our Backlog Board (this is where newly reported issues will automatically appear).
2. Prioritization/Assignment: If the ticket should be considered for 7.1, Tim Donohue will categorize/label it (high/medium/low priority) and immediately assign to a developer for further analysis. Assignment will be based on who worked on that feature in the past.
   a. “high priority” label = A feature is badly broken or missing/not working. These tickets must be implemented first, as ideally they must be resolved prior to 7.1. (Keep in mind however that priorities may change as the 7.1 release date approaches. So, it is possible that a “high priority” ticket may be rescheduled if it is a new feature that cannot fit into 7.1 timelines.)
   b. “medium priority” label = A feature is difficult to use, but mostly works. These tickets should be resolved prior to 7.1 (but the 7.1 release will not be delayed to fix these issues).
   c. “low priority” label = A feature has usability issues or other smaller inconveniences or a non-required feature is not working as expected. These tickets are simply “nice to have” in 7.1. We’ll attempt to fix them as time allows, but no guarantees are made.
3. Detailed Analysis: Developers should immediately analyze assigned tickets and respond back within 1-2 days. The developer is expected to respond to Tim Donohue with the following:
   a. Is the bug reproducible? (If the developer did not understand the bug report they may respond saying they need more information to proceed.)
   b. Does the developer agree with the initial prioritization (high/medium/low), or do they recommend another priority?
   c. Does the bug appear to be on the frontend/UI or backend/REST API?
   d. Does the developer have an idea of how difficult it would be to fix? Either a rough estimate, or feel free to create an immediate PR (if the bug is tiny & you have time to do so).
   e. Are you (or your team) interested in being assigned this work?
4. Final Analysis: Tim Donohue will look at the feedback from the developer, fix ticket labels & move it to the appropriate work Board. If it is moved to the 7.1 Project Board, then the ticket may be immediately assigned back to the developer (if they expressed an interest) to begin working on it.
   a. If the ticket needs more info, Tim Donohue will send it back to the reporter and/or attempt to reproduce the bug himself. Once more info is provided, it may be sent back to the developer for a new “Detailed Analysis”.

On Hold Topics

- Will we need subminor Release Numbering for 7.x?
  1. Should we potentially have subminor (e.g. 7.0.1) releases to fix major bugs or security issues? Or would those need to wait for the next minor (e.g. 7.1) release?
  2. Considering regular, scheduled releases instead of feature-based releases?
     a. Every quarter (3 months) release a new 7.x. Features will be implemented in priority order, but not necessarily guaranteed for a specific release.
- Discussing Release Support now that 7.0 is out.
  1. The DSpace Software Support Policy notes that we support the “most recent three (3) major releases” (where a major release is defined by the changing of the first number, e.g. 6.x 7.x). This would mean that 5.x, 6.x and 7.x are all supported at this time.
  2. Should we propose to Committers / Governance a change of policy to the “most recent two (2) major releases”? This would mean that we move to only supporting 6.x and 7.x.
