DSpace 7.4 is available now!

DSpace 7.4 was released on October 10, 2022.

DSpace 7.3 was released on June 27, 2022.

DSpace 7.2 was released on Feb 7, 2022.

DSpace 7.1 was released on Nov 1, 2021.

DSpace 7.0 was released on Aug 2, 2021. The press release for 7.0 was translated into a number of languages: English, Deutsch, Español, Français, Italiano, Português.

Ready to get started? Download DSpace 7 or Try out DSpace 7 (via our sandbox site or Docker quick install). See the Release Notes for more information.

Additional 7.x Releases will be coming soon!

The DSpace 7 Working Group has already begun work on version 7.1, which will feature the highest priority features listed in the “What features are coming in a later 7.x release?” list below. If you’d like to join the effort, or take the lead on a feature that is not in the highest priority listing, please contact Tim Donohue and/or join a DSpace 7 Working Group meeting.

DSpace v7 versus DSpace-CRIS v7

DSpace v7 and DSpace-CRIS v7 are separate open source products with separate roadmaps and separate governance models. As you may know, DSpace is a community-maintained, open-source platform, including community-elected governance. DSpace-CRIS is an open-source product built/maintained/governed by 4Science, which extends that DSpace platform for research data & information management use cases. DSpace Governance has been in discussions with 4Science regarding convergence of the two products, but the products will continue to be separate in v7.x.

Milestones

DSpace 7.0 will be the largest release in the history of DSpace. It is the culmination of strategic planning by DSpace Governance in response to community feedback, use cases and needs (for additional details see Strategic Planning)

<table>

Later 7.x releases (see "What features are coming in a later 7.x release?")

## Major benefits of DSpace 7

This release finally brings together two user interfaces and their communities, who had previously been working in parallel. The ambition is to bring together the best of both JSPUI and XMLUI worlds, meaning that all features you love and use are re-imagined, and re-implemented on a single new user interface technology, Angular. This new UI is backed by a brand new REST API, which opens all data & features to the web, allowing DSpace to integrate or interact with external systems/services like never before.

The switch to Angular also allows for more rapid innovation. Angular has the potential to attract developers with prior expertise, given the popularity and global traction of Angular across industries.

Want to see what it looks like? Visit Try out DSpace 7
What is included in DSpace 7.0?

The efforts contributed to DSpace 7 are the largest endeavour ever undertaken by the DSpace community. The DSpace 7.0 release will concentrate on the following major features:

1. A new User Interface based on Angular (to replace XMLUI and JSPUI). This work is going on in the "main" branch of https://github.com/DSpace/dspace-angular
   a. The goal of the new UI is to implement all major features of both XMLUI and JSPUI in a single, modern UI.
   b. An exhaustive list of all major features already in 7.0 can be found in the 7.0 Release Notes
   c. NOTE: Some, lower-priority, minor DSpace 6 XMLUI or JSPUI features have been delayed for a later 7.x release (see below). This decision was made to make 7.0 available as soon as possible.

2. A refactored/enhanced REST API (using modern REST best practices). This work is going on in the "main" branch of https://github.com/DSpace/DSpace
   a. Additionally, a new REST Contract (describing all API interactions) is being written at https://github.com/DSpace/RestContract

3. Redesigned submissions and workflows featuring a one page submission process with a drag-and-drop interface and newly redesigned MyDSpace.

4. A new Configurable Entities object model, which allows for the creation of new "typed" Items, and storing relationships between Items. This feature will allow for tighter integration with external identifier systems (e.g. ORCID), current research information systems (CRIS), journal publishing systems, etc. This work was completed by the DSpace 7 Entities Working Group.
   a. Early technical documentation is available at https://docs.google.com/document/d/1wEmHirFzrY3ggG1fr2YBQwGoVH1uTVGmxDI4mGxM/edit

For more information see the Release Notes

What features are coming in a later 7.x release?

Because of the complexity of merging features of two UIs (XMLUI and JSPUI) into one, and the desire to make 7.0 available as soon as possible, we have chosen to release 7.0 as soon as the highest priority features (those deemed most widely used) are completed. Therefore, some features have been delayed for a later 7.x release. See DSpace 7 Release Goals for more information.

Ranking of outstanding features into "Tiers"

In April-May 2021, all DSpace Steering & Leadership members were surveyed on the features not yet implemented in 7.0. They were asked to rank those features on behalf of their institution(s) they represent. In June 2021, a subset of those members compiled the results into 5 "tiers", based on the results of that survey. These "tiers" provide the priority of every outstanding feature, and map to a rough plan for at least five 7.x releases. Features are also ranked within a "tier" based on their number (with #1 being the highest priority within that tier).

RoadMap for 7.5 (due to be released in February 2023)

The 7.5 release will include new features & additional maintenance tasks (bug fixes, usability fixes, etc). Donated features must be submitted based on the following deadlines to be included in 7.5 (otherwise, they will be rescheduled for 7.6):

- By December 1, institutions wishing to donate features should "announce" their intentions by either creating a GitHub issue ticket for the donated feature, or commenting on an existing ticket asking to claim it. If any feature is very large or complex it will require feedback from Tim Donohue and the DSpace 7 Working Group, before it can be scheduled for a specific release.
- By December 23, any donated features must have Pull Request(s) containing suggested code changes corresponding to the feature. These PR(s) will then be assigned to reviewers to provide feedback on code, etc.
- During January, the DSpace 7 Working Group will review/approve donated PRs. Members of this team may provide feedback or requests for changes to the PR(s). We ask that you be responsive, as all PRs must be merged by February 10 – any not merged will be immediately rescheduled for the next release.

Please get in touch with Tim Donohue if you have any questions about donating features back to this release.
Legend / Key

- Task has been completed. It is available in the specified release of DSpace 7.x
- Task is scheduled to be worked on and is likely (but not guaranteed) to be included in the next DSpace 7.x release.
- Task is delayed at this time. It is waiting on reanalysis / reprioritization. Feel free to add feedback to the ticket if this task is a priority to you.

Any tasks without a status icon are not currently scheduled for development, and are unlikely to be in the next DSpace 7.x release (unless a volunteer steps forward to contribute it).

Tier 1: Highest Priority Tasks for 7.x

Note: While these are the features that will be tackled first (via funded development), they are not guaranteed for a specific release of 7.x. For example, they may be added over several releases (a few in 7.1, a few in 7.2, etc.). The number added per release depends heavily on available development resources. If you want to chip in to help things go more quickly, please get in touch with Tim Donohue

See tasks on our Tier 1 Board

1. (Available in 7.3) (Admin) Ability to preview Batch Metadata changes during import of CSV, similar to 6.x. In 7.x, it is possible to import a CSV from the Admin Toolbar, but you are not shown a preview of pending changes. (UI ticket #782, REST ticket #2849)
2. (Available in 7.1) (General) Request a Copy, similar to how it worked in 6.x (UI ticket #779, REST ticket/PR #2129)
3. (Delayed, as this feature is highly complex & may require significant effort or external funding.) (NEW) External lookup of metadata using a search or identifier (e.g. DOI) to enrich an in-progress submission. In 7.x, external searches/lookups can only be done from the MyDSpace page to start a new submission. (REST ticket #2834)
4. (Available in 7.2) (Submission) Embargo entire Item (including metadata) via an "Access" section, similar to 6.x. In 7.0-7.1, only individual Bitstreams/Files can be embargoed during a submission. (UI ticket #767, REST ticket #2839)
5. (Available in 7.1) (Admin) Collection harvested from an OAI-PMH endpoint (like in 6.x XMLUI), and kick off a new harvest from the UI. (UI ticket #761)
6. (Available in 7.1) (Submission) Create a new Item version, similar to 6.x (as either an administrator or a submitter). In 7.0, viewing Item Versions is supported, but new versions cannot be created. (UI tickets #776 and #780, REST tickets #2844 and #2847)
7. (Available in 7.3) (Workflow) Preview an item during workflow approval (via a button/pop-up), to allow for easier accepting/rejecting, similar to 6.x (UI ticket #772)
8. (Available in 7.2) (General) Feedback form, similar to 6.x (UI ticket #763, REST ticket #2836)
9. (Available in 7.3) (Admin) Ability to export metadata (to CSV) from search results, similar to 6.x. In 7.x, it’s possible to export metadata to CSV from a Community/Collection/Item, but not from a set of search results. (REST Ticket #3129)

Tier 2: Medium-High Priority

See tasks on our Tier 2 Board

1. (Available in 7.3) (NEW) Advanced ORCID integration port from DSpace-CRIS to DSpace (Ticket #8157)
2. (Available in 7.3) (NEW) Migrate additional “Live-Import” external metadata sources from DSpace-CRIS to DSpace: (Ticket #3359)
3. (In development) (General) Support for hierarchical controlled vocabularies in Search interfaces, similar to 6.x. In 7.x, hierarchical controlled vocabularies are supported in the Submission form but not in Search. (UI ticket #815, REST ticket #2870)
4. (Available in 7.4) (General) List of Recently Added Items (Recent Submissions) on homepage, similar to 6.x. In 7.x, this is only available on Collection homepages. (UI ticket #667)
5. (Available in 7.3) (Submission) SHERPA/RoMEO integration, similar to 6.x (UI ticket #769, REST ticket #2840)
6. (Delayed, requires further analysis / discussion) (NEW) Export all personal data for your user account (compliance for privacy) (UI ticket #814, REST ticket #2888)
7. (Delayed, as this feature is highly complex & may require significant effort or external funding.) (NEW) Extracting metadata from a bibliographic file (e.g. BibTex, PDF) to enrich an in-progress submission. In 7.x, metadata extraction only will occur when uploading a file from the MyDSpace page to start a new submission. (REST ticket #2833)
8. (In development) (Submission) Supervision Orders (similar to 6.x JSPUI) (UI ticket #808, REST ticket #2878)
9. (Available in 7.2) (General) Support “Browse By” configurations for custom browse options. In 7.0-7.1, “Browse By” options shown in the UI are hardcoded when they should be read from configuration. (UI ticket #852)
10. (Available in 7.3) (Admin) Administrative Control Panel (similar to 6.x XMLUI) (UI ticket #801, REST ticket #2877)
11. (Available in 7.3 - donated by The Library Code) (Submission) Support for type-based submission forms (<type-bind> configuration), similar to 6.x. (UI ticket #905, REST ticket #2873)
12. (Available in 7.2) (Submission) Make an item “private” during submission, similar to 6.x (UI ticket #768)
13. (In development) (NEW) Signposting support, aligning with recommendations from the COAR Next Generation Repositories Report (UI ticket #811, REST ticket #2881)
14. (Available in 7.4) (Integrations) OpenSearch API support, similar to 6.x (UI Ticket #791, REST ticket #2869)
15. (Available in 7.3) (NEW) Versioning support for Configurable Entities (UI ticket #1312, REST ticket #7937)
16. (In development) (Authentication) Ability to disable self-registration, similar to 6.x (REST ticket #3272)

Tier 3: Medium Priority

See tasks on our Tier 3 Board
Tier 4: Medium-Low Priority

See tasks on our Tier 4 Board

1. (Admin) Batch Import from a Zip file in Admin UI, similar to 6.x. (UI ticket #783, REST ticket #2850)
2. (Admin) Batch Export an Item or a Collection to Zip file in Admin UI, similar to 6.x. In 7.x, it is still possible to batch export from command line, but not yet possible from the Admin UI. (UI ticket #783, REST ticket #2850)

Tier 5: Low Priority

These features were deemed lowest priority of all on our list. While most will still be implemented in 7.x, some may also be reviewed for possible removal (or replacement) if the feature is no longer useful. See tasks on our Tier 5 Board

1. (Admin) Edit homepage news from Admin UI, similar to 6.x JSPUI. (UI ticket #784, REST Contract Ticket #49)
2. (Needs discussion / feedback) (Admin) Bulk access control management (previously called “Advanced Policy Manager” in 6.x) - The ability to modify policies on several items at once. (UI ticket #781, REST ticket #2848)

Suggesting new / missing features for our Tier list

If you discover a 6.x feature we overlooked in our Tier listing above, or if you wish to suggest an improvement to an existing feature, we recommend following this process:

- First, check to see if your suggestion already exists in a ticket. Search our frontend tickets and our backend tickets for anything similar.
- If you find a ticket matching your suggestion, add a comment to it, letting us know why this feature is of interest to you / your institution. The more comments a ticket receives, the higher priority it will get.
- If there is not matching ticket, create one! If you aren't sure if the ticket should be a frontend or backend ticket, just create it as a frontend ticket (we can always move it later if we feel we need to)
- Create frontend tickets at https://github.com/DSpace/dspace-angular/issues
- Create backend tickets at https://github.com/DSpace/dspace/issues
Once your ticket is created, we'll analyze it, label it & prioritize it. Keep in mind, tickets may not be prioritized immediately, or may start out as a lower priority (but if others add comments to it, that usually results in us bumping up the priority).

Try out DSpace 7

Try out DSpace 7 has instructions for installing DSpace 7 locally, or via Docker.

If you want to quickly test out the latest DSpace 7 code, you may do so using our demo site.

- **DSpace 7 User Interface Demo:** [https://demo7.dspace.org/](https://demo7.dspace.org/) (Login: dspacedemo+admin@gmail.com, Password: dspace)
- **DSpace 7 REST API Demo:** [https://api7.dspace.org/server/](https://api7.dspace.org/server/) (Login: dspacedemo+admin@gmail.com, Password: dspace)
- REST Contract / Documentation is available at: [https://github.com/DSpace/RestContract/blob/master/README.md](https://github.com/DSpace/RestContract/blob/master/README.md)

Keep in mind, our User Interface Demo uses the REST API Demo as the backend. So, any content created (by anyone) will immediately appear in both locations.

Where is this work happening? How can I track it?

Active development work takes part in the **DSpace 7 Working Group**. This development team meets on a weekly basis (every Thursday). All meetings are open (anyone can attend) and meeting notes are publicly available off the group's wiki page.

We also use **Slack** to communicate between meetings. Anyone can request a Slack invite (see link) to listen in or join discussions.

We are tracking the current status of all active DSpace 7 development in our **DSpace 7 Project Boards**.

When will 8.0 planning begin? Is there a Roadmap for 8.0?

Per a discussion in DSpace Steering in Aug 2022, the 8.0 release will not occur until we've completed the features listed in Tiers 1-4 above. Tier 5 (Low Priority) features may or may not be released in a 7.x release. Some Tier 5 tasks may be reprioritized for 8.x or later based on ongoing feedback. Keep in mind this Tier listing is a living document, so it's also possible some features may be reprioritized into a higher or lower tier based on ongoing feedback.

We cannot yet say how many 7.x releases will occur prior to 8.0, as it depends on how many features we can fit into each 7.x release. We'll create as many (or as few) 7.x releases as necessary to complete Tiers 1-4.

At this time, there are no formal plans for what features will be in 8.0 or when 8.0 will be released. But, we expect the 8.0 roadmap to be formalized as we near the completion of Tiers 1-4 above.

Presentations / Workshops

Here are the latest DSpace 7 presentations: **Videos and Webinars**

Additional presentations/workshops may be found at:

- Older presentations can be found on **DSpace 7 Media and Presentations**
