Unable to locate Jira server for this macro. It may be due to Application Link configuration.										

- b. Plans for a 1.10.1 patch release
- 4. Recent mailing list topics:
 - a. [Change in Home page](#)
 - b. [Change user password](#)
 - c. [Adding External Vocabularies](#)

Notes

[Draft notes in Google-Doc](#)

Changing Solr smoke tests

- Necessary because cores have changed in Solr 5
- New Solr has nested and restful capabilities

Ralph: wants to better document technical requirements. E.g. we discovered that VIVO 1.10 doesn't work with older versions of Linux

- We need to explore compatibility with new versions of Java, especially moving away from Oracle

New pull request: <https://github.com/vivo-project/Vitro/pull/88>

[VIVO-1605] Update to latest Error Prone plugin and configuration to support JDK 11

- Addresses problem during compilation
- Jim left a comment, perhaps it could be updated to use a non-SNAPSHOT version of the dependency
- Latest version of google error prone is v2.3.1 which came out April 20.
- We can hopefully just use 2.3.2 <https://github.com/google/error-prone/issues/1127>
- Also not building w/ Travis for Vitro: [WARNING] Failure to transfer com.google.errorprone:error_prone_check_api:2.3.2-SNAPSHOT/maven-metadata.xml from <https://repository.apache.org/snapshots/> was cached in the local repository, resolution will not be reattempted until the update interval of apache-snapshots has elapsed or updates are forced. Original error: Could not transfer metadata com.google.errorprone:error_prone_check_api:2.3.2-SNAPSHOT/maven-metadata.xml from/to apache-snapshots (<https://repository.apache.org/snapshots/>): Connect to repository.apache.org:443 [repository.apache.org/207.244.88.140] failed: Connection timed out (Connection timed out)
- Don: We will continue to support Java 8?

Compiling VIVO against various OS?

- Can this be done with Travis CI?
- If so, does it come with undue burden? Would we be required to pay extra?
- New wiki table: <https://wiki.duraspace.org/display/VIVODOC110x/System+Requirements>
- Should Solaris be included? We are building with this for a client.

Don - Should we create a link to this in the requirements doc? <https://wiki.duraspace.org/display/VIVODOC18x/Running+VIVO+behind+an+Apache+server>

- As written, VIVO starts twice
- Ralph- we are using something similar
- Don - we have to use Apache, but doing this is a pain
- Ralph - serving VIVO as top level - created a symlink from Tomcat ROOT directory to the VIVO directory
- Should be updated!

New Jira issues

<https://jira.duraspace.org/browse/VIVO-1608>

- Another new error: 2018-10-08 13:32:35,113 WARN [beans] Overriding freemarker.ext.beans.BeatWrapper.finetuneMethodAppearance is deprecated and will be banned sometimes in the future. Use setMethodAppearanceFineTuner instead.
- 2018-10-08 13:32:21,944 WARN [SAXParsers] <http://www.oracle.com/xml/jaxp/properties/entityExpansionLimit> not supported by parser type org.apache.xerces.jaxp.SAXParserImpl, error message: Property '<http://www.oracle.com/xml/jaxp/properties/entityExpansionLimit>' is not recognized.
- 2018-10-08 13:32:21,945 WARN [SAXParsers] entityExpansionLimit not supported by parser type org.apache.xerces.jaxp.SAXParserImpl, error message: Property 'entityExpansionLimit' is not recognized.
- 2018-10-08 13:32:22,349 ERROR [OWL RDFConsumer] Entity not properly recognized, missing triples in input? <http://org.semanticweb.owlapi/error/Error1> for type Class
- <https://jira.duraspace.org/browse/VIVO-1607>

Don - Ralph's symlink worked

Action items - Don to create new page for 1.10 for running VIVO behind Apache

Benjamin - new Jira issue for additional errors thrown startup.

Actions

- [Don Elsborg](#) to create new page for 1.10 for running VIVO behind Apache
- [Benjamin Gross](#) to create new Jira issue for additional errors thrown startup.

Previous Actions

- [Don Elsborg](#) - Create ticket to update 1.10 requirements to show glibc 2.14 dependencies and centos 6 incompatibility
- [Don Elsborg](#) - add jira tickets for abox/tbox use cases - one ticket for each use case
- [Andrew Woods](#) - find out from Mike where the [abox/tbox documentation should be in the wiki](#)
- [Brian Lowe](#) - check with ontology group on handles
- [Alex Viggio](#) will bring news of Elasticsearch instead of Solr up with Product Evolution. Might there be consequences for the September sprint.
