# Administrator Guide

## Optional - OAI-PMH Provider

This guide will help you setup the OAI-PMH provider for Fedora 4 on Tomcat 7. For further details, please refer to the project's documentation on GitHub https://github.com/fcrepo4-labs/fcrepo4-oaiprovider.

## Optional - Audit Service

## Setup Camel Message Integrations

## Import and Export Tools

## Authentication and Authorization

The Fedora 4 Authentication (AuthN) and Authorization (AuthZ) framework is designed to be flexible and extensible, to allow any organization to configure access to suit its needs.

## Deploying Fedora - Complete Guide

Although deploying Fedora is as easy as downloading the WAR file and copying to your servlet container's webapps directory, this document details the process.
