5. FCREPO-2992 - Used to keep track of any information needed that is not persisted in the RDF but rather displayed in the headers.
6. import-export - best to not rely on specific version semantics so that in future it could be possible to use the same (similar) code to import/export from various versions of Fedora.
  - a. How do we determine whether an external, maybe the status code and store the information. Perhaps store a constructed Link header that would be usable to recreate the resource and would store the redirect/proxy definition.
