

# 2019-07-01 Technical WG Agenda and Notes

## Date

28 Jun 2019

## Attendees

- [John Kunze](#)
- [Curtis Mirci](#)
- [Greg Janée](#)
- [Bertrand Caron](#)

## Goals

- Spec 22 revisions. Here's a link to the [differences from our baseline draft](#) (18). The main focus of this draft is turning the normalization description into a list of numbered steps on page 17. Please have a look at this before the meeting.

## Discussion items

Time	Item	Who	Notes
	announcements		new map embedded in the FAQ
	<ol style="list-style-type: none"><li>1. Tom will provide example of their post-encoding (64bit integer in base31 encoding – eg take out 0 vs O)</li><li>2. Greg will review text on normalization to make sure his concerns are met</li><li>3. All should review their position on externalizing persistence statements</li><li>4. Tom will review 5.1.2 more carefully to see if he has issues</li><li>5. All should review section 2.2 Label (language on old and new form language ark: ark:/)</li><li>6. All should please make comments on spec to the list</li></ol> <p>I also made a few very small changes (removing an email address, pointing the NAAN registry at a non-CDL URL). The whole spec needs a thorough review, eg, I'm we might want to drop all of section 4 (but that's a discussion for later).</p>		<ol style="list-style-type: none"><li>1. n/a</li><li>2. done – approved<ol style="list-style-type: none"><li>a. typo: extra comma – fixed</li><li>b. typo: incorrect ref to Appendix A – fixed</li></ol></li><li>3. agreed not to try standardizing on persistence, but simplify section on call it non-normative – Greg and Curtis agreed to review</li><li>4. n/a</li><li>5. done – approved</li></ol> <p>This completes review of all major spec changes discussed at the ARK Summit Experts Day in 2018. All changes approved.</p> <p>Pending additional changes to discuss:</p> <ul style="list-style-type: none"><li>• strawman proposal: the '?' inflection be made identical to the '??'<ul style="list-style-type: none"><li>◦ why? because the latter is much easier to recognize and implement by resolvers, eg, with tomcat and libraries that don't distinguish between a single '?' and an empty query string</li></ul></li></ul>

## Action items

- [John Kunze](#) Go over survey result data.
- [John Kunze](#) Correct reference to appendix A on page 22.
- [John Kunze](#) [Greg Janée](#) [Curtis Mirci](#) Look over the 5.1.1 Generic Policy Service section.
- [Bertrand Caron](#) Write about plans to implement changes for resolver services.
- @All Look over draft 23 <https://tools.ietf.org/html/draft-kunze-ark-23>, specifically section 4.
