

# Binaries and Descriptions

## Binary and Description as Same and Separate resources

In some interactions, binaries and descriptions are treated as though they were a single resource, while in others they are handled independently. The following lists document which interactions fall into each category:

### Binary and Description as the same resource

- Creation of original
- Creation of memento from original
- Enabling/disabling versioning
- Deletion
- Deletion of memento
- Access control

### Binary and Description as separate resources

- HEAD/GET requests (except for a few headers)
- PUT/PATCH to update content
- Creation of historic mementos
- Timemaps/timegates
