✔ = review done, approved.

⚠ = review done, merge conflict or other minor changes requests

1 APPROVAL = pull request only requires a single approval to merge. This is generally reserved for PRs which are either smaller, obvious, and /or bug fixes with tests to prove they work.

Blocked

1. (Blocked PRs go here)

Delayed / Needs Discussion

1. **Managing Authorization info in Angular UI**: How to pass Authorization rights (i.e. logged in user's access rights) from REST API to Angular? See for example: <https://github.com/DSpace/dspace-angular/issues/393>
 - a. Can this be achieved via passed HAL ".links" (e.g. the existence of an "edit" link in REST response means you must have Edit rights)?
 - b. In [July 25 meeting](#), we noted this probably cannot be resolved with just one simple solution. May need to look at different options for different scenarios
 - i. Also likely to need to store/cache a user's Groups in UI layer, as some areas (e.g. Administrative) require knowledge of user group membership
 - ii. Andrea Bollini (4Science) has investigated on that and created the following resources/proposals:
 - iii. **REST Authorization**
 - iv. <https://github.com/DSpace/Rest7Contract/pull/87>
 - v. <https://github.com/4Science/Rest7Contract/pull/1>

2. **REST API Projections:** Unable to locate Jira server for this macro. It may be due to Application Link configuration.
- a. Work begun in *...*
 - i. Based on *...* discussions in our *Oct 17 meeting*.
 - b. (*Outdated*) Early work begun at <https://github.com/DSpace/DSpace/pull/1847>. Discussed in more detail in our *Aug 22 meeting*. Overall, this approach seems like a good direction, need volunteers to move it forward.
 - c. <https://github.com/DSpace/Rest7Contract/issues/2> (discussion resumed by *Andrea Bollini (4Science)* could be relevant for the projection)
3. Initial Performance Testing from Chris.
- a. <https://cwilper.github.io/dspace-perftest/>
4. (REST Contract) Edit Homepage News: <https://github.com/DSpace/Rest7Contract/pull/45>
- a. Delayed until after Preview release. General agreement (*in meeting on March 21, 2019*) that storing HTML in metadata fields is not really ideal behavior. Metadata (from a librarian standpoint) tends to be free of format-related markup (as that allows for easier sharing, understanding of metadata. Currently Community & Collection homepage information is HTML-based and *is stored in metadata* that is appropriate for a minor subset of information (like the title) but it is better to move large/rich text to bitstreams.
 - b. Proposal here is to consider storing HTML-based markup (for Site, Community & Collection homepages) in Bitstream(s) associated with the object in question. May allow for more CMS-lite behavior in the future
 - c. Timeline for this is uncertain. Possibly in 7 or 8. May depend on how/whether it can be scoped.
5. Concurrency in DSpace 7 (or 8). What do we want to do when multiple editors are editing the same object? Needs further analysis regarding implementation details
- a. We've decided (*in meeting on March 7, 2019*) to use ETags to implement concurrency. REST Contract notes on ETags: <https://github.com/DSpace/Rest7Contract#etags--conditional-headers>
 - b. ETags only update if the two fields match. If someone edits first, your edit would fail and you would get a fail response (422?)
 - c. ETags seems to have broader support in other REST APIs. Recommended also by both Art and Andrea.
