

2020-03-02 Technical WG Agenda and Notes

Date

02 Mar 2020

Attendees

- [John Kunze](#)
- [Curtis Mirci](#)
- [Mark Phillips](#)
- [Karen Hanson](#)
- [Greg Janée](#)
- [Roxana Maurer](#)
- [Tom Creighton](#)
- [Bertrand Caron](#)

Discussion items

Time	Item	Who	Notes
	announcements		new NAAN Registry working group should take some pressure off this group CNI to have a panel on AITO
	intro to version 2 of Networked Entity Model		GJ: how do we tell which resolver should deal with inflections TC: what is the purpose of this Nentity Model? JK: to clean up the mess and confusion of the diversity of networked objects that we all deal with TC: unique spelling may not work, using regular words might be better; it would help searchability if keywords appeared reliably and frequently as JSON keywords CM: consider more normal spellings and making new words upper case to make them stand out more GJ: I have trouble with the odd spellings CM: they're hard to remember KH: I also find spellings hard, but the new concepts could be helpful TC: this is quite relevant to what we do with phys/dig objects, and transcriptions; relations are probably covered in specs like linkrel MP: we should look into overlap with other initiatives, eg, OAI, IIIF, signposting, Portland common data model

Action items

- All: suggest alternative spellings instead of the odd spellings
- [Mark Phillips](#) will investigate overlap with things like OAI, IIIF, signposting, Portland common data model
