

Determining Hardware Properties

Disk performance

Use `dd` to write bytes to disk:

```
$ sync; sudo time bash -c "(dd if=/dev/zero of=tmp.dat bs=8k count=500000; sync)"
```

```
500000+0 records in
500000+0 records out
4096000000 bytes (4.1 GB) copied, 34.3706 s, 119 MB/s
```

Network performance

Use `netcat` to transfer a 4GB file from one VM to another VM:

On the client, run `netcat` listener:

```
$ nc -l 1234 > tmp.dat
```

On the server, send a 4GB file to client:

```
$ sudo time bash -c "(nc -w 3 server.host.name 1234 < tmp.dat)"
```

```
real 2m56.656s
user 0m1.612s
sys 0m15.088s
```

the throughput was $4000\text{mb}/176\text{sec} = 22.73 \text{ MB/s}$

CPU

Linux

CPU info is in the virtual file `/proc/cpuinfo`:

```
$ cat /proc/cpuinfo
```

```
