Notes

1. Issues with date formats in migration-utils is getting worked on
2. migration-utils testing
 - a. Calvin is wrangling institutional policies in order to install docker and docker-compose
 - b. UVA is close to being able to test and confirm their migration after bandwidth issues with AWS
 - c. Whitman is in the middle of test migrations
3. Performance updates
 - a. Everything's cached right now except for some containment and ACLs
 - i. ACLs are on the to-do list and have value, but given the nature of how they are applied, are tricky to invalidate
4. CodeGuru
 - a. It's an automated tool that does code review from Amazon. Yinlin ran it on the codebase and it popped 18 warning, none of which major.
 - b. Can be added to CI/CD to test PRs automatically
5. Hash URIs
 - a. As of Fedora 5 you could use them, but they can't be dereferenced on their own
 - b. As of Fedora 6, you can have multiple entities referenced within a single RDFSsource

Actions

- Look through migration util commits since December to see if there are any potential causes of performance drop off.
