

BANG! Data Analysis

Questions:

- Are there relationships between works and other works, works and instances, or relationships from either works and instances to external data that provide useful information to support discovery?
- Can we provide concrete examples and scenarios employing this information?

Avenues:

- OCLC Work IDs
- OCLC Entity Backbone APIs
- ShareVDE
 - [Preliminary queries \(focusing on OCLC Work Ids and other work identifiers\)](#)
- Sinopia
- LOC (Hubs)
- MARC

Explorations

- Working through a concrete example for LOC Hubs, ShareVDE Super works/Opuses
- Wikidata properties around works: supplement what is visible/possible
- Visualize ShareVDE PCC/Cornell (from a few years ago) relationships around different identifiers: ISBNs/LCCNs/OCLC Work IDs
- Follow up regarding OCLC Entity Backbone new Work API
