

Restoring VIVO to First Time State

When Installing VIVO, a TDB database has been created in the subfolder of VIVO home directory defined by `tdbContentTripleSource` in the `applicationSetup.n3` file (by default the subfolder is `tdbContentModels`). To restore VIVO to first time state, simply delete this subfolder.

Now restart Tomcat. VIVO will detect an empty data store, and proceed to load it from the `firsttime`, `everytime` and `filegraph` directories. Tomcat will start, but search indices may take additional time to complete. When reindexing is complete, refresh your browser to see your VIVO returned to first time state.

Your first time VIVO home should appear as shown below.

The screenshot displays the VIVO web application interface. At the top, a dark blue header features the VIVO logo and the tagline "connect • share • discover". Navigation links for "Index" and "Log in" are in the top right. Below the header, a light blue navigation bar contains links: Home, People, Organizations, Research, Events, and Capability Map. The main content area is divided into several sections. On the left, a "Welcome to VIVO" section describes the tool as a research-focused discovery tool for collaboration among scientists. Below this is a "Search VIVO" section with a search bar and a "Search" button. On the right, a "Log in" section contains fields for "Email" (with the value "vivo_root@mydomain.edu") and "Password", followed by a "Log in" button. Below the search and login sections, there are three columns: "Research", "Faculty", and "Departments". Each column has a corresponding button and a message: "No research content found.", "No faculty members found.", and "No academic departments found." respectively. At the bottom left, a "Statistics" section shows a large number "323" with the label "Locations" below it. The footer contains copyright information "©2016 VIVO Project", links to "Terms of Use" and "Powered by VIVO", and links to "About" and "Support".
