Terminology Used in the MOCKUP --

Action -The bean identifier i.e.action_id of the actual action class as configured in the SPRING XML file like--

```
<bean id="{action.id}" scope="prototype">     <constructor-arg type="java.lang.String" value="{action.id}"/>
    <property name="processingAction" ref="{action.api.id}"/>
    <property name="requiresUI" value="{true/false}"/>
</bean>
```

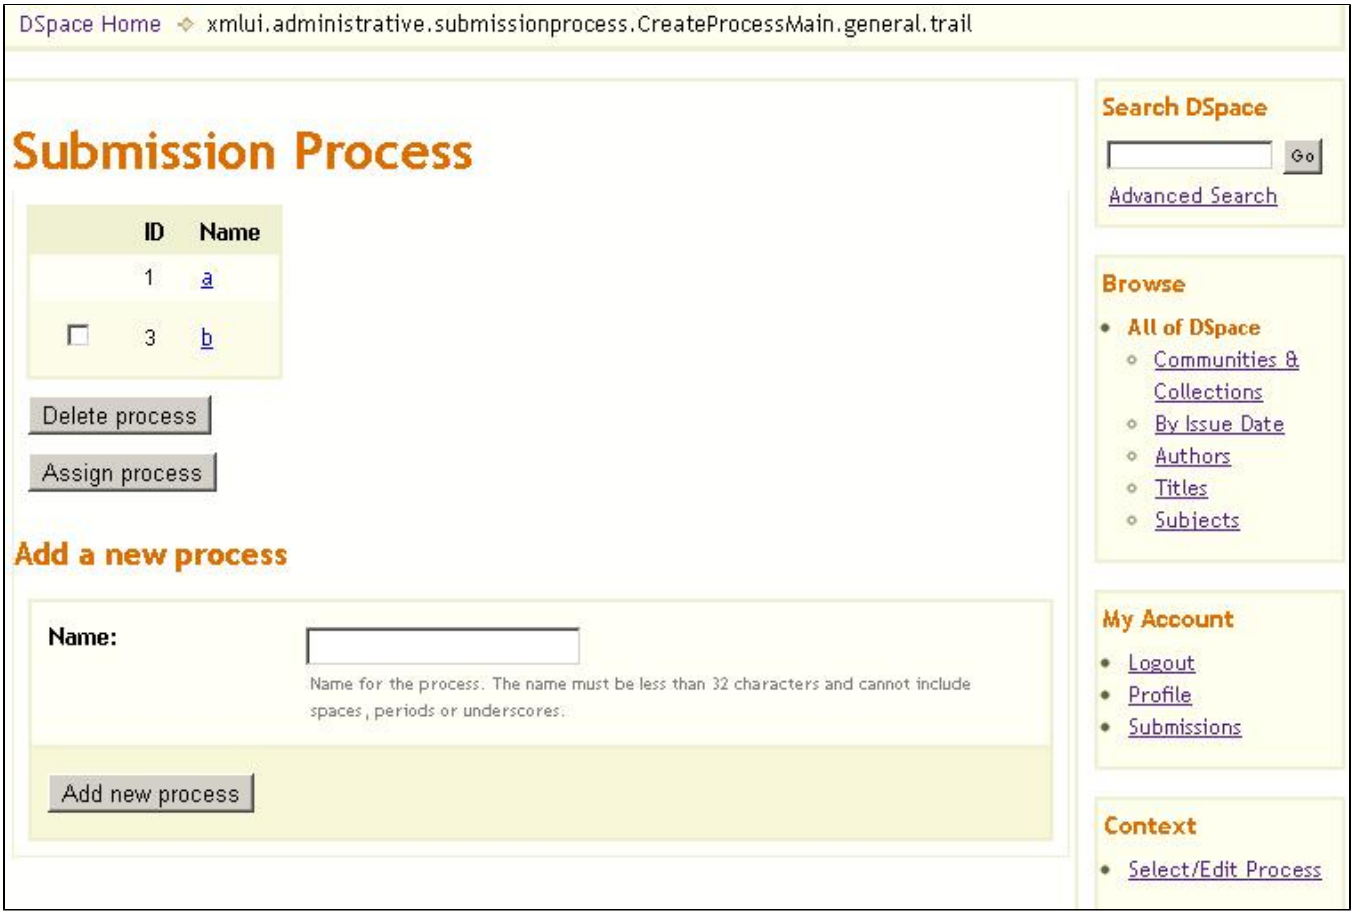

Step-Container of Actions mapped to outcomes

Outcome-Numerical code which will map one step to the next step.

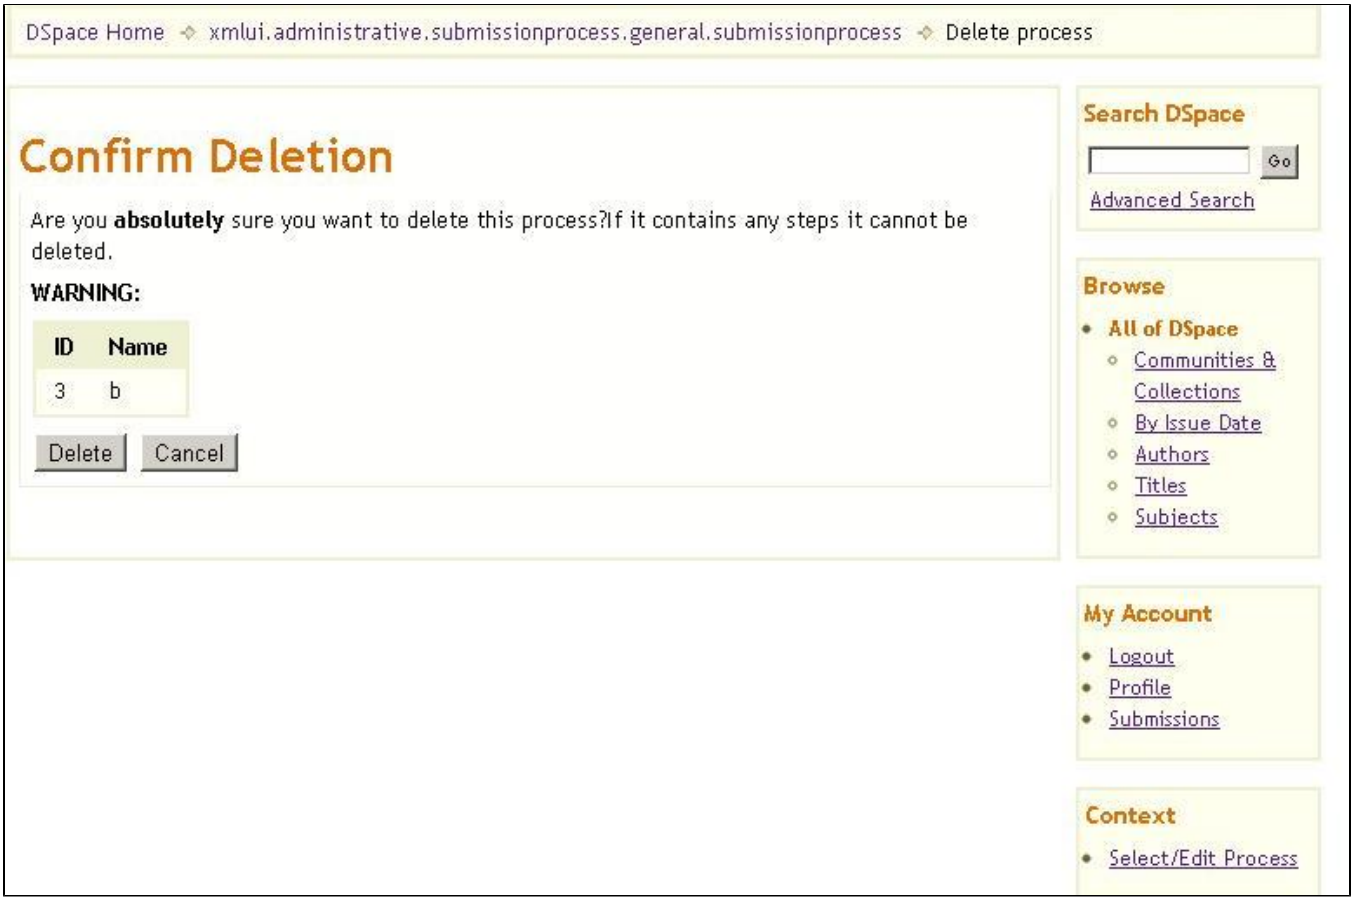

Process-Container of Steps in a certain order

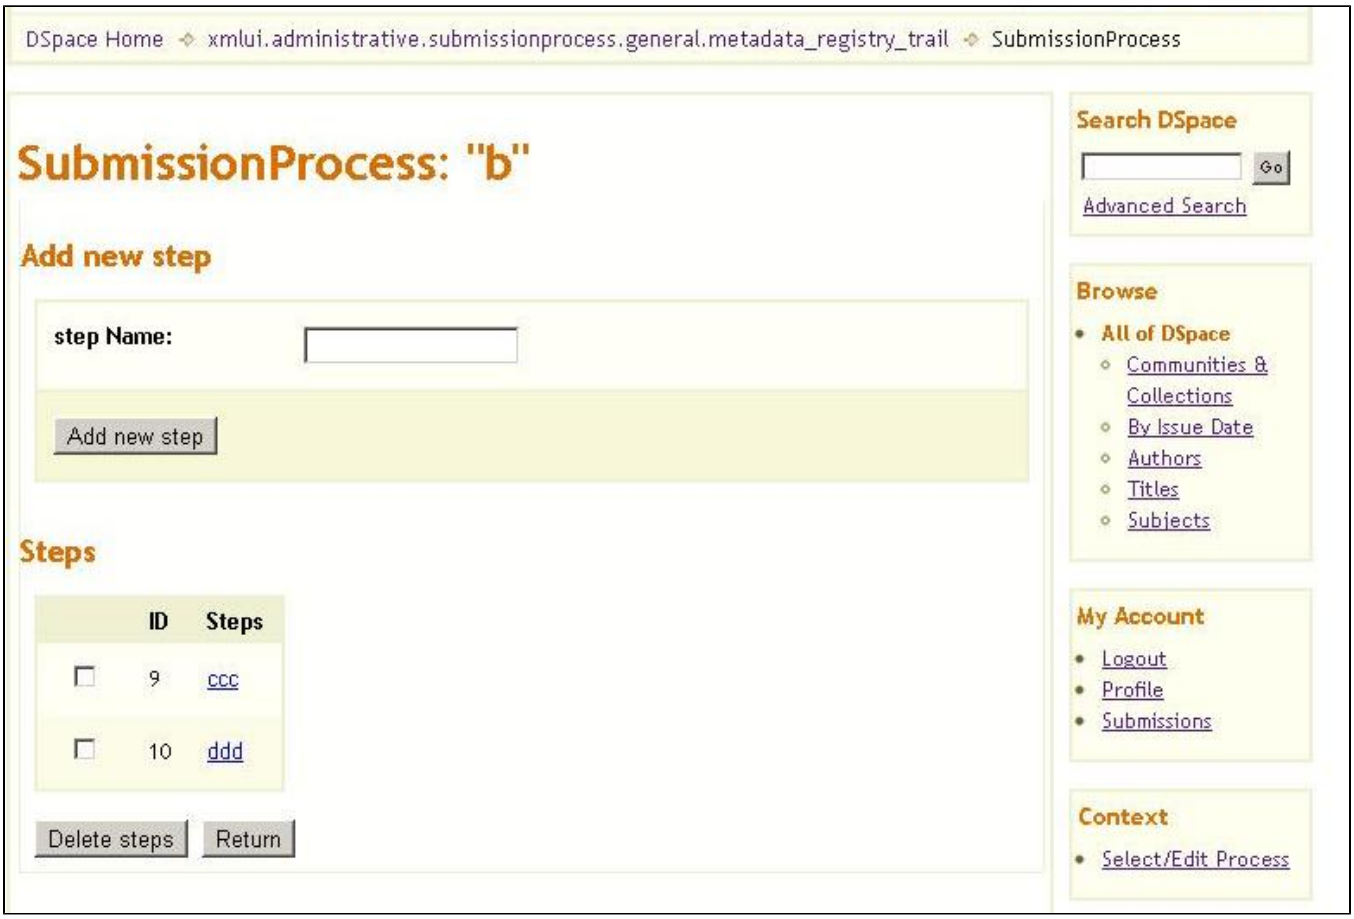

For example- Analogous XML can be specified as---

```
 <!--Standard workflow step-->
<workflow start="traditional" id="default">
    <step id="selectcollectionstep" role="submitter" userSelectionMethod="submit">
        <outcomes>
            <step status="0">editstep</step>
        </outcomes>
        <actions>
            <action id="selectcollection"/>          </actions>
    </step>
</workflow>
```

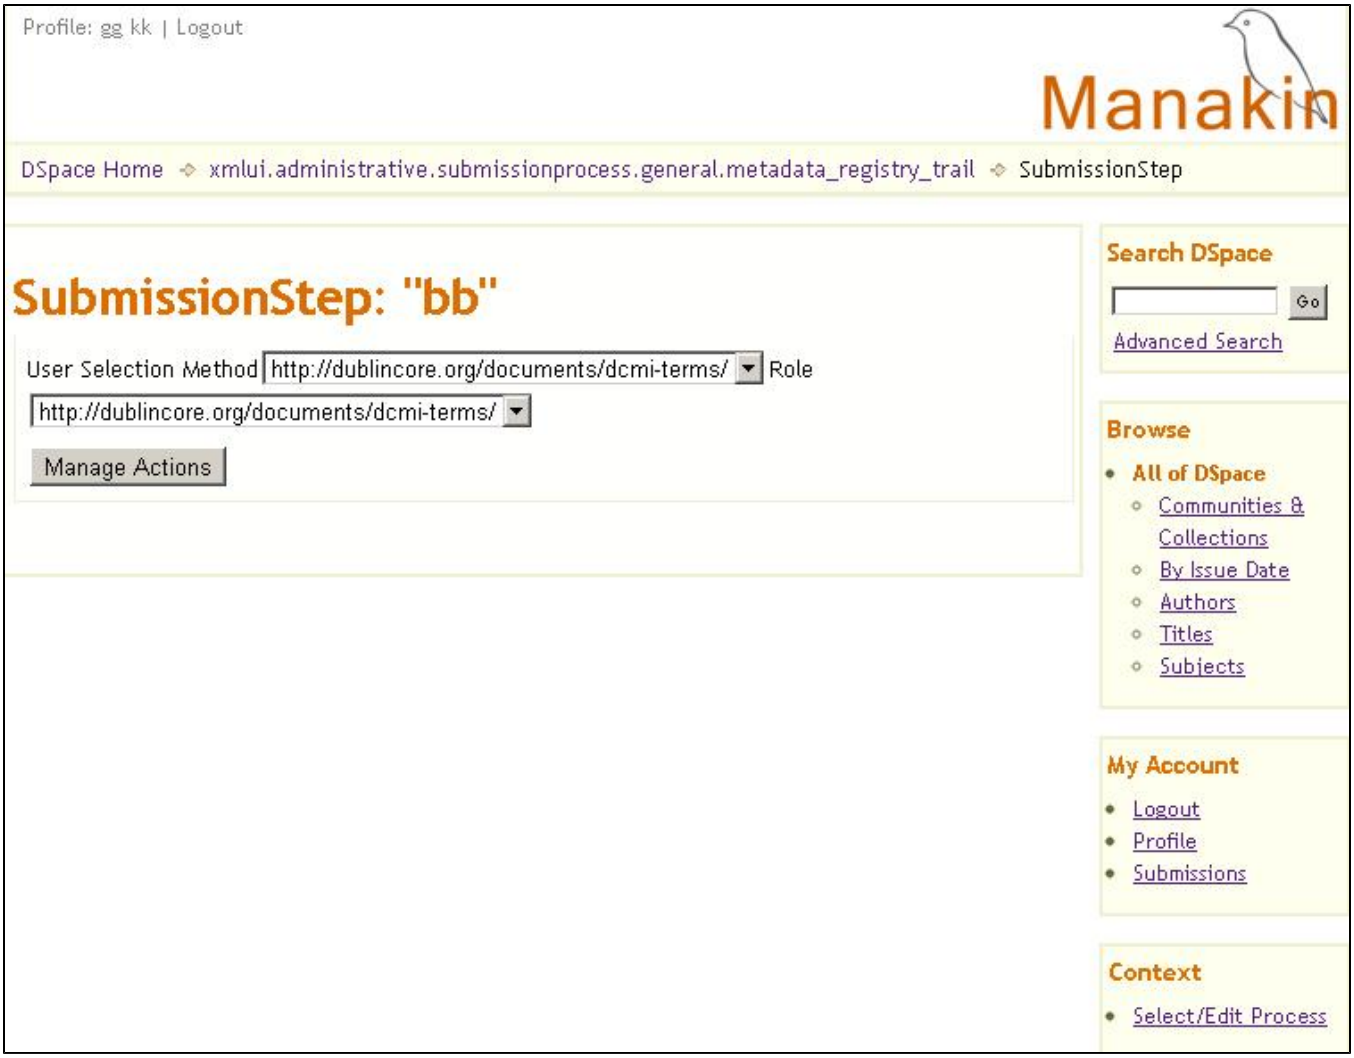

In the above screen the process belongs to the level where the user is currently present.So,it can be community-specific or collection-specific or whole intance-specific.
