Looking to set up a vanilla fedora 6 and share relevant resources with her team.

Is starting work with Fedora 6 as part of Hydrax and Valkyrie (the adaptation layer) integration sprint.

A number of Samvera users are likely waiting on this in order to migrate to Fedora 6.

LMU Munich are on 4.x, so may be able to help.

### New tickets:

FCREPO-3845 - Update repository count validation for Head Only IN PROGRES

FCREPO-3784 - camel-spring-javaconfig has been deprecated OPEN

Danny - This has been open for a while & there has been discussion of xslt service to replace this.

No plan for LDPPath implementation replacement (and no candidates for this).

These tickets seem to have persistent presence

[see Planning backlog on Fedora Project page -

<https://fedora-repository.atlassian.net/jira/software/c/projects/FCREPO/boards/7/backlog?issueLimit=100> ]

Mike will look at recent comments

FCREPO-3655 - application/link-format returns multiple entries for the same second IN REVIEW

Jared's ticket - agreed to close as merged.

## Other topics:

Migrations

Villanova migration - has completed successful migration ater running process for a week.

Demian is willing to do further testing on issues identified and releases relating to these issues are likely within the next 1-2 months.

Validation tool fix (FCREPO-3837) would be good but the char set bug [I assume this is FCREPO-3838?] would be more useful, though not critical.

Danny will liaise with Demian to test.

Demian will be out for 2 weeks.
