

How To Export Downloadable Docs from Wiki

Exporting Documentation from Wiki

- 1 [How to Generate PDF from a Space \(using built in Confluence Tools\)](#)
- 2 [How to Generate PDF version of Documentation \(using Scroll PDF Exporter Plugin\)](#)

How to Generate PDF from a Space (using built in Confluence Tools)

- Go to "Space Tools" "Content Tools"
- "Export" tab
- Select export to PDF, click Next
- Select Custom Export & "Include Page Numbers"
 - Deselect the root page ("DSpace 7.x Documentation"). But select all other pages
- To change the Title page or header/footer, use the "[Editing the PDF Stylesheet](#)" tools in Confluence
 - Space Tools Look And Feel
 - PDF Layout and PDF Stylesheet tabs

How to Generate PDF version of Documentation (using Scroll PDF Exporter Plugin)

To generate the **PDF** document, we currently use the [Scroll PDF Exporter plugin](#) for Confluence.

- Select " ... -> Export to PDF" on the Documentation homepage, e.g. [DSpace 7.x Documentation](#)
- Select Template: "Documentation", Export Scope "This page and its children"
- Click "Show Details"
- Modify "PDF Metadata"
 - Title: "DSpace 7.x Documentation"
 - Author: "DSpace Developer Team"
- Other default settings should be fine, but feel free to double check them.
- Click "Export" button
- Wait for 5-10 minutes while the PDF is generated. Give it a quick look through for formatting errors (larger errors may be highlighted in RED automatically by the Scroll PDF Exporter plugin, which generated this PDF)
- Once complete, rename to "DSpace-Manual.pdf" and upload to the Release in GitHub: <https://github.com/DSpace/DSpace/releases>
- Also add as a download link on the Documentation Homepage.
