

Chapter 8 - Installing Islandora

Overview

In order to install Islandora, you will have to install (at minimum) Drupal and Fedora installed. The next three sections will lead you through the installation of Drupal, Fedora, and the Islandora Module. There are other applications that are required to run modules such as Solr and the solution packs. A list of these dependencies, and installation instructions, are provided in [Chapter 9 - Enabling Indexing & Searching with Solr](#).

This chapter contains the following sections:

- [Installing Drupal](#)
- [Installing Fedora](#)
- [Installing & Configuring the Islandora Module and Servlet Filter](#)
