DCAT Top Priorities

As discussed in the June 12 DCAT mtg, we would like to identify what the top development priorities are for the community -- what features or improvements to DSpace would have the most benefit to the most number of institutions. This can be something we've reviewed already, something you plan to review, something in JIRA or something entirely new. The goal of this discussion is to make a short priority list (perhaps including just 3 features /improvements) and to see if we can regularly market the priority list to the community for help, with a particularly focus on the people who manage developers (and beyond the regular pool of committers and developers). I would challenge everyone to think not just of big, dramatic, sexy features (which may be very large and complex to plan and implement), but also smaller projects that still may have a chance of getting into a release in the near future (perhaps something like the update of Dublin Core). Participation/feedback is welcomed from not just DCAT members, but anyone in the community. To participate in this discussion, simply click the "Add Comments" button below.
