

# How to Purge an Object

Sometimes it is necessary to purge (delete) an object from the repository. It should be noted that this process is irreversible (aside from restoring from backups) so please exercise caution when purging objects from your repository.

## 1. Navigate to The Object You Wish to Purge

Locate the object by browsing or searching the repository and click on it.

## 2. View the Object Details

Click the 'Object Details' tab to expose the 'Purge' button.

 [Purge this object](#)

### 3. Purge the Object

Click the 'Purge' button to permanently delete the object. You will be asked to confirm the action before proceeding.

**You have successfully purged an object from the repository. This action is irreversible.**
