

Research Data

Title (goal)	Support for heterogeneous file size and quantitiy
Primary Actor	Researcher
Scope	System black-box
Level	User
Story	Current research shows that approximately 80% of research data is less than 100MB is size, however with increased production of born digital research content combined with data from sciences, we are seeing a wide variety of data files exceeding multiple gigabytes and in a variety of formats. Researchers need to be able to submit both files by both manual upload and through the use of a bulk upload mechanism and expect reasonable performance.
