

Deprecated__VIVO Harvester SVN Checkout

NOTE: We are now using GIT. Please reference this guide for setting up, but not downloading the VIVO Harvester Source

You may want to read how the SVN Structure is organized before checking out. Check out the [Trunk, Branches and Tags](#) article for more information.

You may also prefer to use one of the [Eclipse plugins](#) for SVN.

Checkout

1. Ensure [Maven](#) is installed
2. Checkout from SVN

```
svn co https://svn.code.sf.net/p/vivo/harvester/harvestersvn/trunk harvester
```

3. cd to trunk directory

```
cd trunk
```

4. Run to build

```
mvn clean dependency:copy-dependencies package
```

Options

1. Use -DskipTests=true to optionally skip tests while building, ie

```
mvn clean dependency:copy-dependencies package -DskipTests=true
```

2. You can substitute checking out trunk for the another branch, ie

```
svn co https://svn.code.sf.net/p/vivo/harvester/harvestersvn/branches/branch-name harvester_branch-name
```
