

# Using the MARCXML Module

Enabling the MARCXML Module will add new options on ingesting or viewing an object.

## Using MARCXML on Ingest

1. Add an object to a collection just as you normally would.
2. After selecting a Content Model and Form, the next step will present the option to browse for a MARCXML record to associate with your object:

The screenshot shows the 'Repository' interface with a dark header. In the top right, there are links for 'My account' and 'Log out'. Below these are three tabs: 'DATASTREAMS', 'PROPERTIES', and 'COLLECTION'. The 'COLLECTION' tab is active. The main content area has a breadcrumb trail: 'Home > Islandora Repository > Repository > Manage'. Below this, the section is titled 'MARCXML File'. It contains a text input field, a 'Browse...' button, and an 'Upload' button. A note below the buttons states: 'A file containing a MarcXML record, to be transformed to MODS. Select no file to create a record from scratch.' At the bottom of the form are 'Previous' and 'Next' buttons. A close button (X) is in the top right corner of the form area.

3. The standard MODS ingest form will now be pre-populated with data from your MARC record. You can add or edit information as desired. All data will be saved as a MODS record.

## Viewing MARC XML

All objects with a MODS datastream will also be viewable as a MARC record. This record can be downloaded as MARC XML.
