

Creating and Adding Pages to a Book

Creating a Book Object

From the 'Add' tab, select one of the book content models available. The content model selected will affect the viewer used to display content.

Ingest digital object into (islandora:bookCollection), Step #1:

Content models available:

- Book (Internet Archive Viewer) ▾
- Book (Internet Archive Viewer)
- Book (IIV Viewer)

Next

About Viewers - Which Content Model should you pick?

The Content Model selected will determine the viewer that displays content to users in a reading edition tab.

The Internet Archives Viewer

The Internet Archives Viewer is designed for pages that are the same or similar size /dimension. By default, two images are shown at the same time.

The Islandora Large-Image Viewer

The Islandora Large-Image Viewer can be used for pages that have different sizes and dimensions. Pages can be interacted with more directly (via cursor dragging), and the images are tiled for zooming. Pages are displayed one at a time.

Filling out the Metadata Form

Once the desired content model is selected, selecting 'Next' will take users to a metadata form.

Type:

personal

Once the form has been filled out and submitted, users are presented with a confirmation message. A link in the confirmation message leads users to the newly created book (which does not yet contain pages).

Adding Pages to a Book Object

A newly created book appears with a default thumbnail. The metadata entered by the user appears on the 'About' tab.

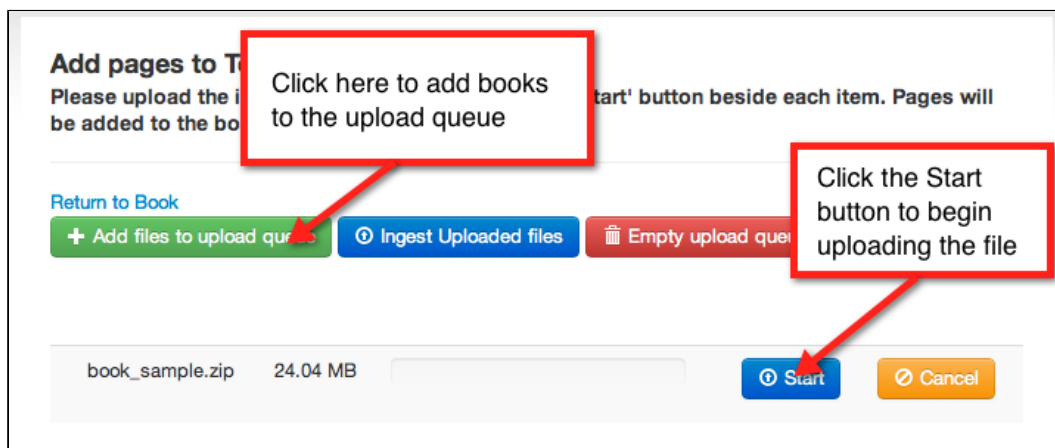

Pages are added via the 'Manage' link under "About".

Uploading and Ingesting Images

Clicking on "Append or Insert" pages leads to the Upload and Ingest screen. Ingesting pages is a two step process - .zip, .jpg or .tiff files are uploaded, and then ingested into the repository.

Images are ingested into the repository in the order they are uploaded. Ensure that images are .tiff files, .jpg files, or .zip files of tiffs that do not exceed 2GB (2GB is the outer limit, 1.8GB is the functional maximum file size). Ensure that files are uploaded in the sequential order you wish for them to appear in the book.

Once files are uploaded, select "Ingest Uploaded Files" to begin the process of adding these pages to your book.

A progress bar appears to indicate how long it will take to create these book pages - during this process, the system is generating image derivatives and performing OCR on the images. This process can take a long time. Do not close your browser while this is happening, or you will only create some of the pages.

The completed Book - Interface Overview

Reading Edition

Once the ingest process is complete, users are taken back to the book object, which now has new tabs available. The default tab is the 'Reading Edition' tab. Because the content model for the Internet Archive viewer was selected at the beginning of this process, the images display in the Internet Archive Viewer.

Pages Tab

The 'Pages' tab displays all of the pages in the book, alongside a default label consisting of the book title and an automatically generated page number. These page numbers and the label for the page can be altered on the page's 'Manage' tab, which will be discussed later in this document.
