Integrations - REST API

Title (Goal)	System will expose a 'REST' API for integration with UIs and M2M services
Primary Actor	System
Scope	HTTP - XML/JSON service
Level	Summary level - no API specifics
Story (A paragraph or two describing what happens)	System will expose a RESTful API with which one can manage content in the respository, including CRUD (create, read, update, and delete) operations on content objects, their containers, etc. The API will also enable administrative operations such as user-management.
