

End User - Crowdsourcing metadata for archived items

Title (Goal)	Allowing end users to extend, correct or enhance metadata on existing, already archived items
Primary Actor	Human
Scope	Submission workflow, versioning
Level	
Story (A paragraph or two describing what happens)	<p>The IR holds a collection of alumni photographs. Sally is an alumnus who was invited to look at the collection, login and tag any of the other alumni she recognizes.</p> <p>Professor Pete is browsing the collection of his department. He notices someone made a spelling error on a subject or another metadata field. This aggravates him. As a member of the institution and able to login to the system, he expects that he's able to jump in and at least make a suggestion for a correction that is swiftly enforced/implemented.</p>
