

Stats/Metrics - Categorize and count item page referrers (Google search, Google Scholar, repository full text search, repository facet search, repository browse, repository related item, external link)

Title (Goal)	Statistics: Categorize and count item page referrers (Google search, Google Scholar, repository full text search, repository facet search, repository browse, repository related item, external link)
Primary Actor	Collection Owner
Scope	
Level	
Story (A paragraph or two describing what happens)	As a collection owner, I would like to see the distribution of how a user arrived at an item in addition to the item counts: Google search, Google Scholar, repository full text search, repository facet search, repository browse, repository related item, external link
