Deleted Record Policy

Deleted Record Policy

Title (Goal)	Support for configurable OAI deletion policies
Primary Actor	Repository Manager, Harvester
Scope	Data access
Level	High
Story	OAI specification describes three tracking levels for record deletion: no, persistent and transient. While `NO` and `TRANSIENT` do not provide any useful information about deleted records, `PERSISTENT` explicitly states the deletion of a previously existing record and thus helps to keep a harvesters database update to date. The repository should allow to configure the deletion behavior according to OAI specification.
