End User - Intelligent rendering of URL's in item Metadata

Title (Goal)	End User - Intelligent rendering of URL's in item Metadata
Primary Actor	System | Human | External System
Scope	
Level	
Story (A paragraph or two describing what happens)	As an end-user viewing an item with metadata fields containing URL's, I can click on the URL's and I can understand the intended purpose (via link text) of specific target URL's such as handles, DOI's, Worldcat URL's.
