

End User - Email Deposit of bitstream for archived metadata-only item

Title (Goal)	End User - Email Deposit of bitstream for archived metadata-only item
Primary Actor	End User
Scope	Submission & ingestion process
Level	
Story (A paragraph or two describing what happens)	<p>The repository of MyInstitution has a large number of metadata-only records as items in the repository. These items were curated by staff who did not (yet) get a hold of the corresponding (open access) bitstream to go with these items. However, a durable link has been made between at least one of the authors on the record and an active institutional staff record.</p> <p>Based on this link, an automated email goes out to the linked staff member, asking to send back the corresponding file attached to the email.</p> <p>The response to the email, containing the attached file, will be automatically processed and the file will be attached as an archived bitstream to the already existing item as a result.</p>
