

deduplication alert

During the submission or the workflow the system check the item signatures to find potential duplicates. If any potential duplicate is found a popup is shown to the submitter asking to confirm or reject the finding

The submitter decision is recorded and available to the administrator and librarians during the workflow (See also [The administrative UI](#))

If the workflow is enabled the librarian will see the same alert popup. If the submitter has declared that the match was a fake they can confirm or flag the record as necessary to merge so to have it highlighted in the administrative UI.
