| <b>Title (Goal)</b>                                       | Reuse authentication parameters from external authentication                                                                                                                                                                                                                                                                                   |
| <b>Primary Actor</b>                                      | System                                                                                                                                                                                                                                                                                                                                         |
| <b>Scope</b>                                              | overall system                                                                                                                                                                                                                                                                                                                                 |
| <b>Level</b>                                              | high summary level                                                                                                                                                                                                                                                                                                                             |
| <b>Story (A paragraph or two describing what happens)</b> | Steve login on the repository and his eperson profile is filled up with a user profile information (name, position, affiliation, projects, orcid, other ids,...) and it has automatically the possibility to deposit on specific collections as it is part of a specific group (based on the information shared by the authentication system). |
