

# Release Notes and Downloads

Here are the release notes for the most recent version of Islandora, as well as links to the appropriate Github repositories. Islandora is released twice a year. Rather than waiting for the release, some institutions prefer to run closer to the most recent code, where bugs might be fixed or new features added. If you encounter a bug in the release (there are always known issues), it's a good idea to review the Github repository for that module to see if a fix has been submitted. Islandora runs a [continuous integration testing](#) framework, which means that new code for Islandora is always tested before being merged.

Please, do not mix and match different versions of modules.

## Release Notes

Some quick notes on community and contribution:

- Complete License normalization was done. Used GNU General Public License v3.0 is now exactly tin every repository.
- [Drupal Filter](#) was added to our release process, which means: it gets a release branch and a proper matching release. Current version is now at 7.1.9, head/master at 7.1.10-SNAPSHOT
- PHP 7.0.x and 7.1.x were added to our Travis-CI test matrix and are fully supported now.
