RESTful HTTP API - Backup and Restore

- POST fcr:backup Initiate a (consistent) backup of the repository
- POST fcr:restore Replace repository content with data from a backup directory

Request URI: /

Methods: GET, POST

POST fcr:backup Initiate a (consistent) backup of the repository

You may include a backup directory in the body of the POST request. If you do not specify a directory, the backup will be stored in a temporary directory on the server (which will be returned in the response body). As yet, there is not a REST API method for retrieving the content of the backup.

Example:

```
curl -X POST "http://localhost:8080/rest/fcr:backup"
```

Response:

```
Status: 200 OK

Body:
/tmp/fcrepo4-data/path/to/backup/directory
```

Example 2: Including a destination directory

```
curl -X POST -d /path/to/backup/destination "http://localhost:8080/rest/fcr:backup"
```

Response:

```
Status: 200 OK
```

Status:

200   OK

POST fcr:restore Replace repository content with data from a backup directory

Example:

```
curl -X POST --data-binary "/tmp/fcrepo4-data/path/to/backup/directory" "http://localhost:8080/rest/fcr:restore"
```

Response:

```
Status: 204 No Content
```

Status:

| 204 | Backup restored |

| 500 | Error restoring backup |
