

Give Collections/Communities short names/acronyms

Title (Goal)	Improve Users experience when displaying item location data
Primary Actor	Administrator
Scope	
Level	
Story (A paragraph or two describing what happens)	<p>Allow administrators to assign ACRONYMS/short names to communities and collection. It would be best to enforce that sibling collections/communities never have the same name and that the names are indeed short, meaning names have a maximum number of characters. The specific number should be a global configuration setting.</p> <p>Use these short names where screen real estate is tight, with the goal of allowing more information to be displayed in a concise and thus more readable fashion.</p> <p>Usage example:</p> <ul style="list-style-type: none">+ include break crumb like item location in search results+ include break crumb like location in drop down lists when users are to choose a collection+ show acronym of enclosing collection instead of full name in item lists+ ... <p>A hover over feature could allow access to the full name.</p>
