

Event-driven APIs

Fedora provides options for developing event-driven architectures around the core system.

HTTP APIs

Message Queues

Fedora can publish events on a JMS message queue.

Java APIs

Fedora provides an "EventBus" for Fedora events.

ModeShape also has some tightly-integrated asynchronous operation machinery called [Sequencers](#).

ModeShape sequencers can automatically unlock the *structured* information buried within all of those files, and this useful content derived from your files is then stored back in the repository.
