

jena2tools

jena2tools is a command line Java utility which uses the Jena libraries to export data from a Jena 2 VIVO system (versions 1.9.3 and earlier). Jena2tools exports both the data store and the configuration store. The exports are stored in vivo-home/dumps.

jena2tools is used during an upgrade process from VIVO versions running Jena 2 (version 1.9.3 and earlier). See [Upgrading VIVO](#)

jena2tools can also be used to export your VIVO configuration and content for sharing, and/ or use in other tools. See [Exporting Data from VIVO](#)

Running Jena2tools

1. Shutdown Tomcat
2. Use `java -jar jena2tools.jar <options>`
3. Your dumps will be in vivo-home/dumps

Help

```
java -jar jena2tools [arguments] -d home_directory

Arguments
-d, --dir      REQUIRED. Specify the VIVO/Vitro home directory
-i, --import   Import TriG format data to triple stores
-e, --export   Export data from triple stores. Default format is TriG
-h, --help     Display help text
-f, --force    Force overwrite of previous exports
-o, --output   Output format followed by one of nt, nq, jsonld, trig, rdf, or ttl
```

Repository

Source code for Jena2tools can be found in GitHub here: <https://github.com/vivo-project/jenatools>
